## *View from the Dome*

**Dear Family, Friends, and Fellow Researchers,**

**WOW!** First and foremost, I speak for all of us here in Lakemont when I offer a sincere and heartfelt **THANK YOU!** ...for the tremendous response we got from everyone who was able to participate in our Grand Opening sale. While before we felt like a bit like a foal wobbling about the meadow on broomstick legs, thanks to all of you we are now up on our feet and steady. While of course it's a good feeling to be pulled back away from the edge of the cliff financially, more importantly your calls, letters and orders have made it crystal clear that both the need and demand for these technologies is as great as ever. For our part, we intend to keep it coming!

This issue of the *Kelly Research Report* is spent exploring the many ways in which electricity is literally a driving force in our lives, as well as the lives of the crops, gardens and livestock to which the scalar technology may be applied. On the smallest scale, electrical charges are the very glue that bind us together on the atomic level, the pumps that flush toxins and wastes from the body's cells, and are responsible for the impulses that drive our nervous systems.

Reaching more broadly, practically everyone in this nation lives their lives completely surrounded by an electrical and telecommunications grid that simply did not exist 125 years ago; how does this affect life's more subtle electrical systems? Are malevolent forces utilizing these grids to poison the foods we eat?

Expanding our view to the planetary, while everyone has seen lightning flash in a summer storm, did you know that lightning strikes somewhere on the Earth's surface **100 times per second?** Indeed, the entire planet is a *very* active electrical system driven by the unlimited power of the sun, captured in conducting atmospheric layers that stretch 950 miles above the planetary surface!

Most importantly, we don't just tell you about these interesting phenomena; whenever possible we have tried to generate practical tips and strategies you can use to enhance the positive and combat the negative. Remember, in these troubled times we're going to have to help each other and help ourselves!

**OUR MISSION** is to put top quality scalar and phase conjugate technology in the hands of the vast community of radionic, psychotronic and other "subtle energy" researchers and practitioners.

# ***KILLER PSYCHIC FORCES***

The very name conjures terrible visions of invisible hands weaving a black ribbon of malignancy through our nation's breadbasket, sickening our crops through transmission of harmful electromagnetic frequencies injected through our own electrical and cell communications grids. These dark works are assumed to be orchestrated by shadowy government, terrorist or even alien forces that seek to control mankind's destiny by controlling the quality of the food supply.

While there is evidence that the electrical and radio grids may indeed be a source of ill health, the answer may be less sinister in most cases. Doctors and scientists have said that the sheer density and intensity of the world's electrical and transmission grids may be negatively affecting life, with increased risks of leukemia and/or brain tumors in humans<sup>1</sup> living within close proximity of high tension power lines. It may be that no harmful "killer" frequencies are needed, that the electrical system itself is poisonous.

Dr. Frankenstein was right about one thing; electricity plays a key component in Life on Earth. Every plant and animal is an electrical being at several fundamental levels:

- Electrical charges are the glues that bind the world together at the atomic level. A simple and familiar example of this phenomena is witnessed when the strong positive electrical charge on a Sodium atom causes it to fuse together with a negatively charged Chloride atom to form a perfect little cube of table salt, a magnet-like bond<sup>2</sup>.
- Differences in ion strength are the electromagnetic pumps that flush and circulate water and nutrients through every living cell on the planet<sup>3</sup>. Toxins will remain trapped inside cells walls until an actively charged ion in solution draws it through the cell's membrane.
- Any living thing with a nerve bundle uses electrical signals to move information and muscle control signals up and down the wet circuits<sup>4</sup>.

It seems intuitive that the delicate balance in these circuits could be upset by the presence of an external electrical field.

For these reasons electromagnetic emissions from our technological infrastructure may affect the performance of any of these finely-balanced electrical systems, adversely affecting plants and livestock alike.

**Kelly Research Report** is published by Kelly Research Technologies, Post Office Box 128, 121 Oasis Road, Lakemont, Georgia, 30552. EDITOR-IN-CHIEF: Ed Kelly. *Kelly Research Report* is published bimonthly. Copyright in the United States. Reproduction in whole or in part is forbidden unless written permission has been granted by the publisher. Annual subscription rate is \$25.00 in North America, \$40.00 (U.S. Dollars) else where. Single copies and back issues are \$5.00 each. Correspondence and subscription requests should be sent to *Kelly Research Report* at the above address. Expiration date for a subscription is shown in brackets following the subscriber's name on the address label. Publication of this newsletter in no way constitutes a claim that psychotronic, radionic or scalar technology devices are effective in the treatment of disease or other human ailments. These devices are designed to be used for personal research and/or agricultural purposes only. We are not in the business of treating people and/or teaching to treat people to treat people. This material represents research that is being passed on for enlightenment of others who are following, or wish to follow, similar paths.

## Defensive Strategies

One of our researchers that detected Killer Psychic Forces with a herd of cows out in Wisconsin consistently found that those cows that test high for Killer Psychic Forces were consistently also testing weak in the amino acids (24.00-21.25), with intensity readings of less than 120.

Amino acids are the building blocks of all proteins, and a deficiency in amino acids seemed to allow KPF and/or sensitivity to the electrical grid to more deeply impact the cows.

In any case, researchers finding high levels of Killer Psychic Forces in crops or animals should also check for strength in the amino acids. Any amino acid found below 120 should be pushed

above 200. Once complete, KPF strength may be re-tested and would be expected to drop.

For a crosscheck, a sample of a good natural amino acid dietary supplement may be added directly to the specimen well while testing for Killer Psychic Forces. If there is an immediate reduction in KPF strength, an amino acid deficiency is likely.

## Conclusion

Whatever the source of Killer Psychic Forces, your variable-capacitance Psychotronic tuner can be used to assess and reduce their impact through direct reduction and, in some cases, fortification of amino acid levels.

# Killer Psychic Forces Worksheet

KPF Rates	Initial Intensity	Intensity w/ Amino Acid	Broadcast Time	Ending Intensity
10.25-34.50				
11.50-46.50				
21.00-11.00				
26.25-28.50				
39.50-69.50				
46.50-00.00				
25.00-21.50				

⇒ Remember, the amino acid can be cross-checked using either the rate (24.00-21.25) OR by placing a high quality supplement in the specimen well.

## Quick Tip: DIETARY FIBER

Fiber is the indigestible portion of food that travels through the digestive system virtually intact. While dietary fiber has no nutritional value, it can have a profound impact on health, including:

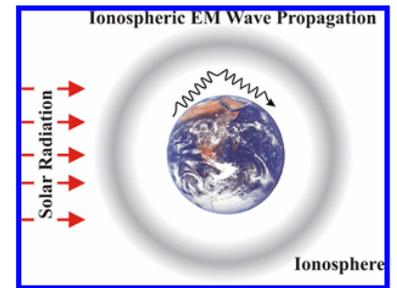

- Lowering the risk for certain types of cancer
- Lowering blood cholesterol levels
- Minimizing the complications of diabetes.
- Appetite control.

Natural sources of fiber include whole grain baked goods, dried fruit, berries, oranges, apples, and popcorn!

## Schumann Resonance Frequencies vs. Electromagnetic Pollution:

*In which we are reminded that there is more than one way to skin a cat!*

Traditional science and electrical engineering alike tell us that the Earth behaves like an enormous electric circuit. The atmosphere that surrounds the planet is actually a weak conductor. If there were no sources of charge, its existing electric charge would diffuse away in about 10 minutes<sup>1</sup>. At the same time, the terrestrial surface of the planet is a near-perfect conductor on a global scale. Radiation from the sun ionizes the earth's atmosphere and forms a conducting plasma layer (regions of uniform electron density) at altitudes between 40 and 950 miles. These nominally concentric conductors have long been exploited for long-range radio communications; Radio waves are reflected off the ionosphere to the terrestrial surface, then bounced back to the ionosphere, and so on. In fact, the earth and ionosphere form an electromagnetic resonant cavity<sup>2</sup>.

Schumann Resonances are quasi-standing wave electromagnetics that exist in this cavity. The resonant properties of this terrestrial cavity were first predicted by the German physicist W. O. Schumann in 1952. Schumann realized that, given that the earth's atmosphere carries a charge, a current and a voltage, it would not be surprising to find such electromagnetic waves. These waves were actually detected by Schumann and König in 1954.

Like waves on a spring, Schumann Resonances are not present at all times, but have to be 'excited' to be observed. They are not caused by anything internal to the Earth, its crust or its core. They seem to be related to electrical activity in the atmosphere, particularly during times of intense lightning activity. They occur at several frequencies between 6 and 50 cycles per second; specifically 7.8, 14, 20, 26, 33, 39 and 45 Hertz, with a daily variation of about +/- 0.5 Hertz. So long as the properties of Earth's electromagnetic cavity remains about the same, these frequencies also remain the same<sup>3</sup>.

Researchers like Beck and Puharich have long theorized that life on Earth is uniquely adapted to thrive in the presence of the Schumann Resonate Frequencies, that a kind of harmonic balance is achieved between the land and its plants and animals. **Fearing that these natural frequencies could be drowned out by the electromagnetic smog in which most of us live, Peter Kelly developed a pocket-sized transmitter that does nothing but broadcast a 7.8 Hertz pulsed wavelength in both the normal electromagnetic frequencies and also as a scalar wave.** Many individuals who tested these transmitters reported that being in presence of the extreme low frequency Schumann waves tended to reduce the level of negative electromagnetic environmental impacts. Dad thus concluded that the extreme low frequency (ELF) 7.8 Hertz waves may ameliorate ionizing radiation and set about developing a transmitter that could be easily used by friends and family.

The **Extreme Low Frequency (ELF) Transmitters** were made available to the public some 20 years ago and are now available in two sizes:

The **ELF I (\$100)** is battery powered and small enough to carry in pocket or purse, allowing the user to generate a small 7.8-Hertz Schumann pulse wave wherever they go.

The **ELF II (\$130)** plugs into a regular 110-volt wall outlet and generates a 7.8-Hertz Schumann pulse wave in a room-sized area.

A **12-volt "cigar lighter" automotive adapter (\$12)** will allow you to take your **ELF II** on the road!

Like all Kelly Research Technology products, the **ELF** transmitters are covered by our 100% satisfaction guarantee. Send them back undamaged within 30 days and we'll refund your money, no questions asked!

## WEATHER ALERT: Playing it safe with

# LIGHTNING!

Lightning strikes the surface of the earth about 100 times every second. Each flash contains about one **billion** volts of electricity, enough energy to light a 100-watt bulb for three months. In the United States, an average of 67 people are killed each year by lightning. Many more are struck but survive with a variety of long-term, debilitating symptoms, including memory loss, attention deficits, sleep disorders, numbness, dizziness, stiffness in joints, irritability, fatigue, weakness, muscle spasms, depression, and an inability to sit for long.

Here are some tips to ensure you and your family have a safe summer:

### DO NOT:

- **DO NOT** seek shelter under isolated trees or other tall, isolated objects. Lightning typically strikes the tallest object. That may be you in an open field or clearing.
- **DO NOT** place campsites in an open field on the top of a hill or on a ridge top. If you are camping in an open area, set up camp in a valley, ravine, or other low area. A tent offers NO protection from lightning.

- **Stay away from metal objects**, such as fences, poles and backpacks. Metal is an excellent conductor. The current from a lightning flash will easily travel for long distances.

### DO:

- Seek shelter in an enclosed building, meaning one that is fully enclosed with a roof, walls and floor, such as a home, school, office building or a shopping center. Unsafe buildings include car ports, covered patios, picnic shelters, beach shacks/pavilions, golf shelters, camping tents, baseball dugouts and other partially open structures.
- If no permanent structure is available, seek shelter in a safe vehicle, including a hard-topped car, SUV, minivan, bus, tractor, etc. (soft-topped convertibles are not safe). If you seek shelter in your vehicle, make sure all doors are closed and windows rolled up. Do not touch any metal surfaces.

**If lightning is in the immediate area, and there is no safe location nearby, get into the lightning desperation position. Crouch down but DO NOT lie down. Bend your knees down while keeping your feet together.**

From the National Weather Service web site: [www.lightningsafety.noaa.gov/outdoors.htm](http://www.lightningsafety.noaa.gov/outdoors.htm)

Throughout history mankind has utilized the power of **HOT MINERAL BATHS** to heal wounds, relax muscles, and melt cares away. The Romans built elaborate public baths in every part of the Empire. Remains of Roman baths can be found today in locations as wildly varying as Algeria, Bulgaria, France, Germany, Spain, The Netherlands, the United Kingdom and, of course, Italy<sup>1</sup>. Many of them were at once engineering marvels and artistic masterpieces. Unless a local hot spring allowed direct access to natural hot water, large fires were drawn through the very structure of the bathhouse that not only heated the water in the baths, but also warmed the very tiles under the patrons feet. Ingeniously, the entire building was essentially a very large chimney:

Roman Public Baths in Bath, England<sup>2</sup>.

**Romans** heated the floors and walls of the bath by lighting a fire in a fireplace that opened underneath the building. Hot air from the fire would be drawn into the open space beneath the bath's floor. The hot air would then rise up into tubuli, hollow clay boxes Romans built into the bath's walls. Hot air and smoke would exit from chimneys at the top of the building.<sup>3</sup>

**Another** factor that was consist among the Roman bathhouses; they were utilized by the entire community wherever they were built, each bathhouse typically containing three pools for each of the genders: a hot one, a lukewarm one and a cool one<sup>4</sup>.

**The Romans** were certainly not the only ones to realize the curative powers of hot water! Whether soaking in the elaborate Victorian-style bathhouses of Hot Springs, Arkansas, the lushly landscaped pools built on the slope of a volcano in La Fortuna, Costa Rica, or in a simple rock enclosure alongside the Rio Grande in Big Bend National Park, Texas, natural hot springs fueled by geothermal sources have always been recognized and celebrated by the people who lived around them, their waters prized not only for the comfort and relaxation, but also because of the curative properties provided by the unique combinations of minerals dissolved within those waters.

**Today** there are many ways to enjoy the benefits of a mineral bath right at home! Hot tubs and spa tubs are available in a range of prices, and virtually every home has a bathtub. Foot bath units are available at pharmacies and major national retailers for under \$30. Use the Mineral Bath Schedule on Page 7 to develop your ideal mineral bath program by dowsing with a variable-capacitance Psychotronic tuner or a pendulum.

In years past folks came from all over the country to take elaborate health and spa treatments at bathhouses like the Fordyce Bathhouse in Hot Springs, Arkansas, now an U.S. National Monument. The ground water here is heated by normally occurring radioactive elements deep within the Earth's crust<sup>5</sup>.

Baldi Terme resort, a few miles north of La Fortuna, Costa Rica, located on the flanks of the Arenal volcano.

The ruins of a hot spring-fed spa at the spring's junction with the mighty Rio Grande, with a nice view of Mexico. This river exists because of a massive rift zone that was born when the Colorado Plateau began to slowly drift apart from the Great Plains<sup>6</sup>.

# MINERAL BATH SCHEDULE

The following list describes some of the common additives you can use to make your own mineral baths. You may utilize your Psychotronic tuner or a pendulum to dowse for the bath solutions, times and amounts that may be most helpful.

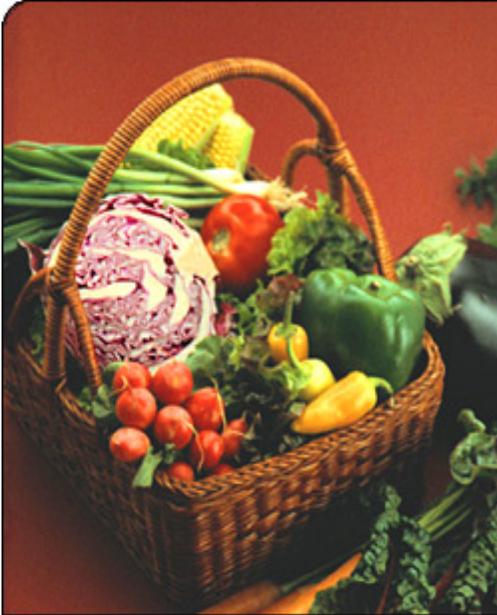

Important notes to remember:

- A **foot bath** should be ankle deep and as warm as tolerable.
- A **full bath** should not be too hot, only a comfortable, moderate temperature.
- It is important to **pay attention to time** in order to ensure that toxins do not concentrate and begin to be reabsorbed into the body. If additional time is needed: flush the old water, rinse the tub and begin with a fresh bath.
- Consult your physician before commencing any bath regimen or taking any supplements, especially if you are pregnant, ill, or your health is compromised in any way. For that matter, if you haven't had a check up in a while, consider getting one from a doctor you trust.

Bath Solution	Instructions	Comments	Key Ingredient	Rate for Dowsing	Initial Reading	Amt to Add to Bath	# of Minutes	# of Baths	Final Reading
			GV	9.00-49.00					
<b>Apple Cider Vinegar</b> (with the "Mother"):	EXTERNAL: Shake well with each use, add to bath water.	* May have a balancing affect on the pH.	Potassium	30.50-67.00					
	INTERNAL: Take 1 teaspoon in 3 ounces of good water with evening meal.	* Associated with the right side of the body.							
<b>Baking Soda</b>	Add to bath water.	* This may affect a change in the pH.	Alkanity	26.00-41.00					
	While taking the bath sip a blend of fresh squeezed lemon in 4-5 ounces of good water.		Acidity	34.00-84.00					
<b>Boron</b>	EXTERNAL: Borax washing powder is a source of Boron that can be used in the bath.	* Boron helps with calcium assimilation and may offer some protection for radiation.	Boron	24.00-52.50					
	INTERNAL: DO NOT TAKE BORAX INTERNALLY! Seek a nutritional supplement from a health food or drug store.								
<b>Epsom Salt</b> (Magnesium Sulfate)	EXTERNAL: Add to bath water.	* May have a balancing affect on the brain and heart. * Known to help relax sore muscles.	Magnesium	27.00-13.00					
	INTERNAL: Follow instructions on package.	* Laxative properties if taken internally.							
<b>Hydrogen Peroxide (3%)</b>	EXTERNAL: Add to bath water.	* Often used to help flush the skin when the body is detoxing.	Oxygen	31.50-13.50					
	INTERNAL: Do not take internally.								
<b>Sea Salt</b> (Regular or Iodized)	EXTERNAL: Add to bath water.	* May help balance the thyroid.	Sodium	82.00-42.00					
	INTERNAL: First thing in the morning, use a pinch of salt on tongue after drinking 8 ounces of good water.	* Associated with the left side of the body							

## Organic Products: Consumer Profiles

While the debate rages on regarding the government's definitions of what constitutes "organic", according to the Organic Trade Association there is no doubt that the average American consumer has begun to pay significantly more attention to what is in the foods he or she eats:

- [In 2004] sixty-six percent of U.S. consumers report they use organic products at least occasionally. That number is up from 55 percent in 2000. [This] surge has been largely driven by increased access to organic products in mainstream markets, heightened concern about health, gradual emergence of organic alternatives in mainstream brands, and an increase in information sources.
- The 2004 Whole Foods Market® Organic Foods Trend Tracker survey found more than a quarter of Americans (27 percent) are eating more organic products than they did one year ago.
- Conducted by Synovate in August 2004, the survey of 1,000 U.S. consumers showed 54 percent have tried organic foods and beverages, with nearly one in 10 using organic products regularly. Reasons cited for buying organic foods included the environment (58 percent), better health (54 percent), and better for supporting small and local farmers (57 percent). In addition, 32 percent believe organic products taste better, while 42 percent believe organic foods are of better quality.
- Sales of organic meat products in North America were projected to surge during 2004 due to rising consumer demand, according to a report published by Organic Monitor. The report noted that the [Bovine Spongiform Encephalopathy (mad cow disease)] scare caused the Canadian market for organic meat products to expand by 35 percent in 2003.
- Supermarkets are providing natural and organic foods in their stores and, in fact, remain the dominant outlet for these products, according to [a] Food Marketing Institute 2004 study. About four in ten consumers consider organic claims at least occasionally when selecting a product to purchase for the first time, the study showed. Also, four in ten shoppers indicated it is at least somewhat important for their primary grocery store to offer natural and organic products.
- Hispanic consumers are significantly more interested in natural and organic products than is the general population, more likely to shop the natural products channel, and more likely to want their stores to carry natural and organic products, according to a report from the Natural Marketing Institute.
- Seven in ten Americans express some concerns about the health risks of pesticides, hormones, antibiotics and other chemicals used in food production, according to a national consumer opinion poll conducted by Roper Public Affairs on behalf of Organic Valley Family of Farms. **The survey found consumers felt smaller scale family farms were more likely to care about food safety than large-scale industrial farms, and that it was important to know whether food is grown or produced locally or regionally.**

*The Organic Trade Association ([www.ota.com](http://www.ota.com)) is the membership-based business association for the organic industry in North America. OTA's mission is to encourage global sustainability through promoting and protecting the growth of diverse organic trade.*
