## ***View from the Dome***

### **Friends and neighbors,**

I want to begin by thanking everyone for your words of kindness and congratulations for the celebration of our 30<sup>th</sup> anniversary of service to the field of radionics, as well as the reception we have received for our new radionic instruments - **The Seeker** and **The Beacon**. I am so proud of the response we have gotten – it has simply been tremendous. Again, thanks to all of you!

In this issue we lead with some ideas and observations from our good friend Pennsylvania Pete. Pete began his research in radionics just a few years ago, yet he is already bringing some fresh and interesting insights to the field. He touches on an absolutely monumental point; whether “cold scanning” a new scalar rate or running a program that you have run a hundred times before, a clear focused intent is fundamental to the success of your radionic research.

This is a theme that reappears in a new article by Cathie Jordan, in which she shares the secrets of advanced potentization that were developed some 20 years ago in collaboration with my stepmother, Marianne Kelly. Together they were able to develop a simple but extremely effective method for imbuing **complex and long lasting energy patterns** into physical media, thus creating the electronic equivalent of the medicine bags and prayer stones of traditional and native cultures. This is a process that you can easily duplicate in your own laboratory using the principles you are already utilizing on a daily basis.

Together these articles help illustrate that clear visualization of the specific outcomes you desire provide the blueprints for creation of the realities that you wish to achieve. It is the active focus of the mind - that intangible but undeniable living consciousness inside each of us – that is the interface between the boundless and infinite energy of universal creation and the three dimensional world that we perceive as physical reality. Whether through prayer, mantra or radionic instrument, it is the actual act of focusing that gives shape to these destinies large and small. (It is for this reason that a drawing on a piece of paper can serve as an effective radionics device, though of course this approach has the significant disadvantage of using the *operator* as the source of energy rather than allowing the hardware to do the work after the rates are set.)

The act of visualizing and clearly establishing the outcomes you wish to achieve are of pivotal importance to reaching all of your goals in life, not just in the field of radionics. Ever wonder how some people seem to accomplish so much while other seems to languish amid vague dreams of health and wealth? The act of devising specific plans for specific outcomes not only provides that fundamental focus and energy, but the act of planning illuminates the path from here to there. Will there be roadblocks, obstacles and pitfalls? Yes, almost certainly... but the very process of identifying those barriers also starts the process of identifying the ways to either eliminate those obstacles or to move over, under or around them. Keep moving forward with clear destinations in mind and you will find yourself standing on the thresholds of those dreams that once seemed impossible. **Nothing is impossible! Everything is achievable!**

With warmest wishes to you and yours,

PS: Also in this issue is a new feature: **KRT Connections**. This is your opportunity to directly communicate with the other KRT subscribers around the world. Send us your message or announcement and we will publish it!

**OUR MISSION** is to put top quality scalar, resonance and phase conjugate technology in the hands of the vast community of radionic, psychotronic and other “subtle energy” researchers.

## Radionic Thoughts by Pennsylvania Pete

I think it is funny that I am writing about Radionics because so many people know much more than me but then I always did a lot of writing! In fact, one of the thrills of my life was when I saw one of my articles translated into Japanese. For those more advanced than me I hope this doesn't bore you. If I provide some misinformation feel free to tell everyone but make sure you also tell me!

I am becoming increasingly comfortable with thoughts about radionics and how it can be used to make life interesting. I love cold scanning so this is something that I feel is a natural way to work. The real problem is in defining what I want to cold scan for. I also reject all limitations. Any limitation not imposed by God just means that I went about it incorrectly. Radionics has become part of my religious belief. In fact, it has made my faith stronger. God gave us a great tool in radionics and I use it just as I use prayer. Here are a few of my experiments.

Something I thought of several months ago was that my system, a Kelly Large Ag,\* and I might not be fully attuned to each other. Keep in mind that everything worked very well. I was getting really good results but I wanted to see if I could optimize the connection between the system and myself so that my results would improve. I came up with the following statement, "Prepare operator for maximum effectiveness in operating unit and results of operating unit with harm to no one". I cold scanned and got the result 25.00 - 27.50. Next I cold scanned for the statement, "Prepare unit for proper operation and maximum effectiveness of results with no harm to anyone. I got the results of 27.75 - 38.75. Finally, I cold scanned for the statement, "Clear area of all bad and protect area during operation". The result was 38.50 - 58.00. Since I believe that the radionics unit is just an extension of myself and since I was operating the unit there was no need to put anything in the witness well. What would I put in? A witness of the Radionics unit? A witness of me? Both? It seems to me that neither was necessary in this special case since I was operating upon the combined system of me and the unit, using me and the unit. I think this worked but you can find out for yourself.

I have been thinking about the fact that a radionics unit works even without power. In fact, just the symbol of a radionics unit works! The first radionics unit I ever used was printed on paper in a class at a USPA conference. It worked! Old magazine articles from some impressive people also indicated that the symbol of a radionics unit would work. This gave me an interesting idea which I want to experiment with in the future. I setup a radionics unit and put it in broadcast mode. If I take a picture of it what I have is a symbol of a fully setup and operating radionics unit! I think that if I then pin a witness to this symbol of a system it should operate. The witness completes the circuit. It is worth thinking about and playing with.

I have managed to find a larger than expected number of books on Radionics at Amazon.com and eBay. When I see a book on this topic I generally buy it. I really enjoy reading and books are my preferred form of reading. A book that I picked up several months ago and really enjoyed is a small yellow paperback entitled, "My Search For Radionic Truths". The subtitle is, "with Possibilities of Acceptance by Science and Medicine". The book was written by R. Murray Denning is published by Borderland Sciences Research Foundation and has an ISBN of 0-945685-01-7. As so many radionics books seem to be, this one is a personal account and is set in Great Britain. The book was first published in 1981 with the first U.S. edition published in 1988. The book was hard to put down. It actually has several photos!

Many of the timers that I have purchased for use with my radionics system have been mechanical. I didn't want the battery to run out just as I was using it. To put it bluntly, I now know why my teachers (THANK YOU GUYS!) use electronic timers. I found a really nice timer made by Williams-Sonoma. It has three banks just like my Kelly Ag system. The banks are setup vertically and I use the top timer to represent the top bank, the middle timer to represent the middle bank and so on. I purchased it on eBay and it was not expensive.

Finally, for anyone interested in forming a Radionics discussion group in the Philadelphia area please contact the publisher of this newsletter. My concept is that it will operate similarly to a book discussion group but the subject will be radionics. This will be informal and noncommercial so I have nothing to sell. It will just be a fun time with people interested in radionics talking about radionics!

# PSYCHOTRONIC FARMING

*A controversial technique is having a growing impact in the farm community*

An Interview with Peter Kelly by Leslie Aickin

Originally published in *Living With The Land* (IC#8) Winter 1984, Page 55. Copyright (c) 1985, 1997 by Context Institute.

---

**Leslie:** How does psychotronics work?

**Peter:** It is really very simple, if you first understand what modern physics has discovered: Everything in this universe seems to be patterns of energy at its primary level, and it is these patterns of energy crossing and recrossing their nodal points and their resonant points that make the physical universe, or seem to. They create a holographic pattern which is the physical substance itself. Psychotronics is a way of tuning into these patterns of energy - these nodal points of crossing or points of resonance, whatever you want to call them.

**Leslie:** How do you do that tuning, what equipment do you use?

**Peter:** Our tuners are rectangular boxes, about 2 feet long, by 1.5 feet high by 1 foot deep, filled with various electronic components, and functioning somewhat like a bridge circuit in ordinary electronics. As you may know, a bridge circuit has three known sides plus a fourth side that can be filled by an unknown component to be tested. In a similar way, a psychotropic tuner detects the energy fields around whatever you put into it.

**Leslie:** Where do you put the specimen that you are working with?

**Peter:** Into an input well. You then turn the dials connected to the variable capacitors, and (here's where it gets a little tricky) you have to rub an acrylic plate at the same time until your fingers stick to the plate. The operator has to be trained to do this successfully.

**Leslie:** So the operator winds up being part of the whole circuit?

**Peter:** Normally. We've had some success with a system that does away with the operator, but it's still in the experimental stages.

**Leslie:** What then do you do with these techniques?

**Peter:** When you can tune into something and attune to an aspect of it, then it's possible to modify its patterns of energy, and thus to affect the physical substance that is based on these patterns. For example, if you have a pattern that corresponds to a e coli bacteria and you were to transpose this pattern electronically and feed it back 90 degrees out of phase, in theory, you would see that the two opposite wave forms should cancel out, which would mean that the e coli would be cancelled out, and that is what we find to be the case in working with primitive organisms. Particularly in agriculture, things in their larval stage, or their simpler stages, are most amenable to cancellation or elimination.

**Leslie:** On the physical plane would you be observing dying?

**Peter:** Not dying, disappearing.

**Leslie:** So you wouldn't have a remnant form or body?

**Peter:** No, not in the very simple organisms. In a more complex one, you would have some remnants, but in the simple ones they just go back to their native materials, like water and basic energy. I know in research that has been done in, for example, corn borers, the corn borers literally

dissolve in the ear of corn itself. You see the path leading down into where they were and just a wet smear, and that is all that is left of them, to be reabsorbed by the corn.

That is where psychotronics has come from. The direction it is going to is completely different. We've started taking to heart a lot of what Dr. Phillip Challahan has been saying. He is an entomologist with the USDA out of Gainesville FL, and author of the books *Tuning In To Nature*, *Soul Of The Ghost Moth*, and *Ancient Mysteries, Modern Visions*. In his books he shows that the structure of the insects themselves make them receptors for microwave level radiation or near infrared - very high microwave - and that the signal that comes off of, say, a field of unhealthy corn broadcasts to these insects and attracts them. So our approach nowadays, rather than trying to kill anything (since everything has its place in nature somewhere, even the insects in cleaning up diseased corn or unbalanced crops), would be to raise the vitality of the plant, raise the vitality of the field, so that the insects are no longer attracted to them in the first place.

**Leslie:** In addition to no longer attracting damaging insects, does healthy corn also attract helpful organisms?

**Peter:** Absolutely. In connection with this we could go in a number of different directions, but let's start with the soil. Over the years, the soils in most fields have become literally a witch's brew of chemicals in various levels. First, they have put on mineral type fertilizers that tend to make the soil more full of salt every year, which means less conducive to life. Second, they have been using herbicides and pesticides to try to eliminate the problems that their unhealthy soil has caused.

We take that soil and in enough instances have demonstrated that first, we can neutralize these various chemicals that have been placed on these fields over many years. Second, we can clean out any imbalances in the fields that existed in the first place. Then we match the soil to any of a number of varieties of seeds. In effect, what we're saying is, "OK, you seeds, which of you can grow best in this type of soil?"

**Leslie:** You use a psychotronics device in order to determine this?

**Peter:** Oh yes, and find out what nutrients are available in the field, and then comparing it to what the plant would need through to its full production as a crop. Then we can potentize or add energy of the seed back to the seed. Now that seems strange unless you can remember that because everything is patterns of energy, if we take the pattern of energy off of a seed, then we can replicate that pattern of energy and cast it back to the same seed. Next we take the fertilizer that shows best suited to the seed and the soil, and take out any factors that show to be detrimental to either the seed or the soil. Before we apply the fertilizer, after we have cleaned it out and balanced it, we can potentize it, which means that if before you needed a ton per acre, now you only need 200 pounds per acre. And then we can find out what the seed and later the plant is going to need all the way until it is harvested as far as additional minerals or nutrients or whatever.

**Leslie:** So you can set up a program to encourage maximum health for the plant throughout its whole cycle?

**Peter:** Right through to harvest. What we are trying to do is to take the very inexact science of agriculture and make it a more exact science so that a farmer doesn't have to spend as much to produce, and yet what he does produce is very high in quality. To give you an example, one of our farmers last year had a total planting cost per acre for corn of \$29/acre, compared to a national average of about \$120/acre.

He's taking his own manure, turning it into compost, and balancing it and potentizing it using his psychotropic techniques. He is getting equivalent yields to anyone in his neighborhood, yet spending only 1/4 what they are. His product doesn't mold, doesn't spoil, has very high sugar readings because of the way he is producing it. We have other farmers who have sugar (Brix) readings on

their alfalfa hay that are astounding, up around 30% sugar range, which is unheard of. Having such a high quality, such a high natural sugar level, the stuff doesn't spoil.

**Leslie:** So storage becomes an easier function as well?

**Peter:** Absolutely. The way it's been done in the past is that the old salesman comes up to the farm and says, "Well, how many acres you going to do in corn this year?" And the farmer says, "Well, I'm going to do 200 acres in corn." And the guy says, "You are going to need X tons of fertilizer, when do you want it, and how are you going to pay for it?" And he just takes what they bring him.

**Leslie:** Which is a very low labor approach in one way of looking at it, not in the long term, but in the sort term. Do you find that farmers using your type of fertilizing program put more labor into the care of their fields, as opposed to more money?

**Peter:** There is a balance struck. For example, it doesn't take much thinking to realize that if you are spending \$29 or \$30 per acre as opposed to \$120 per acre, somewhere in there is a \$90 per acre premium that you are going to get, and you can afford to spend a little bit more time in doing your own composting.

**Leslie:** How would you characterize the people who seem to be attracted to using psychotronics as an alternative to conventional methods?

**Peter:** The ones that are at the bitter end, one step away from bankruptcy.

**Leslie:** They have one more crop to make it or break it?

**Peter:** That's right. And once they have turned things around and at least break even for that year, once they see how what we're doing is cost effective, then they're sold for life. Now some of the farmers that we've trained have taken the better part of a year to get their land clear, to get their animals cleaned out, to get the cows so that they don't have chronic mastitis, or whatever. But if they stick with it, they get results. For example, there are all sorts of tests they do on milk and on dairy herds in most states. Typical is what they call a somatic cell count of the milk. Up to something like a million cells is relatively safe. We have farmers now that (without putting any antibiotics in their feed like most others do) are getting somatic cell counts under 100!

They also don't have a lot of abortion taking place in the cows, which has been a big problem for a lot of farmers. These guys clean and balance their feed and water, and also work on their crops. So something is happening, it's real, and it's affecting their bottom line where everything is affected in the end.

**Leslie:** What kind of time commitment does your training take?

**Peter:** My best answer is as much time as they have to spare.

**Leslie:** This is for basic training in how to use psychotronics equipment and becoming familiar with their fields and that sort of thing?

**Peter:** Yes, and then the big thing of course is taking it home and using it. Those that do are becoming very successful. Those that put it on the side or just say well, you know, maybe this isn't what I thought it should be, end up without any real gain. It is not something you can do a little of, you have to make a commitment to work on these things, as we teach, and if they do, then we virtually guarantee they will have changes in their operation. We haven't lost a farmer yet, once they got hold of what we're doing, which is pretty remarkable when you consider the rate of farm bankruptcies in recent years.

**Leslie:** How do these farmers hear about psychotronics in the first place?

**Peter:** Everything has been word of mouth so far. One guy telling his neighbor who tells his neighbor who tells a relative in another state and they are curious, or they have a friend that's curious, and they have heard of it or something. We have as yet to advertise anything we've ever done and yet, between the personal classes and the agricultural classes, we've trained over 2000 people in five years.

**Leslie:** That's a substantial number of farmers, Peter.

**Peter:** Yes, and it's going up exponentially, too.

**Leslie:** How widespread is psychotronic farming? Where do the people come from?

**Peter:** I've had people from Hawaii, Maine, California, Washington State, Idaho, just about every state in the U.S.. I've got apple orchards in Connecticut and Vermont, dairy farmers in New Jersey, Pennsylvania, Ohio, Iowa, Wisconsin. All through the farm belt, everywhere. As a matter of fact, I can't think of a single state where I haven't trained at least one person so far, plus many from other countries also.

**Leslie:** Do you find that the people who are using psychotronics with farming come from any particular age group or educational background?

**Peter:** No, we've had them from 18 years old to the late 70s in the classes we've taught. In fact we've had one elderly couple from western Virginia that have a goat farm. We also get people from many different religious and philosophical backgrounds. In addition to all the usual denominations, we've had Amish, Mennonites, and others of the "plain people," as they call themselves.

**Leslie:** So the people who are using it, then, are not necessarily people who are already predisposed to alternative solutions?

**Peter:** Exactly. For some of them, that's the farthest thing from their minds. We feel very comfortable about that because we're creating a level of awareness that is affecting the whole nation, not just a specialized group of freethinkers.

**Leslie:** How does what you are doing with psychotropic farming relate to approaches like biological agriculture and permaculture?

**Peter:** It adds a whole other dimension and puts you 5 years ahead right away because you can absolutely see the relationships between your land and anything you put on it or do with it. In our training, what we stress, more than any other thing, more than the actual treating of the land, is the capability to know exactly where your land is at - the absolute ability to diagnose.

**Leslie:** Could the techniques you are developing be used as a technological fix that would still leave some important attitude questions about the land unaddressed?

**Peter:** I won't claim that these techniques can't be misused, but all our material is set up to teach a person to go for a cause behind a cause behind a cause. For example, at one time the farm family was thought of as the healthiest segment of the population, with all that fresh air, good hard work, and good basic food. But now because of all the chemicals they are using, the farm community is full of stories of heart attacks and early cancers in 20 and 30 year olds and a birth defect level higher than the national average.

So our first emphasis for these folks is for them to get themselves cleaned and balanced, and attitudes are an essential part of this. Once they have done this, then they can do the same thing to everything around them, their animals and then their land.

To make it work, you have to deal with the whole system.

## CONTEXT INSTITUTE

The interview with our founder, Peter Kelly, was reprinted with permission from the great folks at the CONTEXT INSTITUTE. Since its founding in 1979, CONTEXT INSTITUTE has explored how human society can achieve true sustainability, with the ability to meet the needs of the present without diminishing the prospects for the future. The CONTEXT INSTITUTE serves as both a catalyst for promoting lasting cultural change and a resource for planetary success strategies.

Executive Director Lianna Gilman notes, "We are best known for our journal, *IN CONTEXT: A Quarterly of Humane Sustainable Culture*, which was in print from 1983 to 1995. Our journal's themes and articles integrate systems thinking, solutions orientation, ecologically sound principles, long-term perspective, and the belief that each one of us has something positive to contribute toward a sustainable future."

The entire collection of *In Context's* 900+ articles are currently available at the CONTEXT INSTITUTE website: [www.context.org](http://www.context.org).

---

Our friend Pennsylvania Pete wants to form a **discussion group for radionic researchers** who live in the area of Philadelphia, Pennsylvania. Any interested parties are welcome to drop us a note or give us a call and we'll pass on his telephone number.

---

**Back To Your Roots Soil Solutions** is pleased to host **Fundamentals of Radionics** – a three day course in basic subtle energy theory and applied radionics with an emphasis on practical use of the instrument to agriculture, livestock and the environment in which we live.

This course will be held on Monday, December 8 through Wednesday, December 10, at the Ramada Hotel and Golf Dome in Saskatoon, Saskatchewan. Enrollment in the course is \$350 for new students and \$150 for returning students, with all fees payable in Canadian dollars.

For complete information and enrollment please contact:

**Back To Your Roots Soil Solutions**

Box 1236  
Shellbrook, SK S0J 2E0  
Canada

Phone: 306-747-8124  
Fax: 306-747-3469  
Email: [backtoyourroots@sasktel.net](mailto:backtoyourroots@sasktel.net)

*KRT Connections is provided as a service for the benefit of those researchers who seek to participate in a free exchange of ideas and information with like minded individuals. Kelly Research Technologies cannot be held responsible for the accuracy or effectiveness of any information exchanged or delivered at any class, seminar or between any two parties.*

# Advanced Potentization

by Cathie Jordan

Back in the early 1990's Peter Kelly's wife, Marianne, would regularly host a weekly meeting of a group of friends who held a common interest in exploring and sharing interesting ideas, unique talents and special skills. Any given week we would learn about one of a wide variety of topics – crystal use, tuning fork resonance, and many others. After many thought-provoking sessions the members of the group were separated by life's ever-moving currents, until eventually only Marianne and I remained.

## Potentized Programs

We decided to focus our investigations of deeper uses for the radionic equipment beyond the day-to-day energy balancing we had been doing. One opportunity for study came to light almost immediately; at the time several researchers had remarked on just how much day-to-day energy balancing one really should do in the course of maintaining a busy farm or other energy system.

As is so often the case, we found the answer by looking to the older technologies of the world. We were familiar with the concept of traditional prayer stones and Native American "medicine" bags - physical objects that are charged with beneficial energy patterns through direct interaction with the limitless power of the human mind. Meditation, prayers, blessings and sacred chanting – these are but a few of the methods that have been used around the world to define, focus and energize an intent into a physical object.

In the past we had used the Electronic Potentizer to make crystals charged with energy patterns for protection, luck or other daily assistance, but up until that point we had only imprinted one energy pattern at a time. We decided to see if we could use the Electronic Potentizer to imprint a complex collection of scalar energy patterns into a physical object – entire programs of benefits that would work at comparable levels of power and longevity as the traditional methods.

## Defining the Intent

Pivotal to success when dowsing for radionic rates is the operator's ability to clearly focus his or her intent on the outcome(s) that are desired. The human mind acts as a focusing lens through which energy can be directed during the visualization process. As the level of detail and focus brought to the visualization is increased, so is the mental lens more sharply focused toward a specific future reality actually coming to pass.

In order to ensure our goals were clearly defined, we started by outlining what we wanted each program to accomplish over the long term, then established very clear intents for each program. We also decided to try to address any possible patterns of interference that might challenge our core intent, thus making them more universal and less specific to a given situation, and strong enough to deflect any negative patterns.

## Developing the Rates

**Primary Rate:** After we defined the core intent of the program we developed a primary rate for this statement by dowsing with the radionic instrument. We felt that by establishing a core rate we would avoid swaying from the program as we produced it. In this way, the primary rate would serve as the central column that would support the rest of the program.

**Secondary Rates and Supportive Mechanisms:** Next we listed the secondary components of the program and the supportive mechanisms. These were statements of intent that helped to further define exactly what we wanted the program to do, and to help reduce the risk that the program would also deliver unintended consequences or negative side effects. Early on we found that a program imbued with only the primary intent could be too harsh. Adding supportive mechanisms allowed the programs to work in very mild, subtle ways. Supportive mechanisms could be anything that was effective in easing any abrupt responses from the core purpose, such as colors, mineral reagents, other homeopathic remedies, chakra energy systems, meridians and affirmations, as well as additional scanned radionic rates.

### Basics of Rate Scanning

1. Set all rate dials on all banks to zero, then turn on as many banks as will be utilized. (Use of multiple banks allows creation of more complex energy patterns.)
2. Focus with as much clarity and mental intensity as possible on the goals and objectives of the rate being developed.
3. Scan for the most powerful scalar resonance points on each bank by turning each rate dial in turn while selecting the most pronounced response from the rub plate, pendulum or other detection method.
4. Fine-tune the final readings on each dial by *very carefully* scanning the area within a couple of ticks on either side of where the initial response was noted.
5. Record the final one, two or three bank rate.

**Closing Statements and Rate Protection:** Finally, we developed closing statements - elements of intent that ensured that the programs could not be easily altered, nor the energy therein subverted to other purposes. These protective rates served as a final layer of protection for the core intent at the center of the program.

The resulting programs could be extremely long and complex! Our *Earth Stones* program was developed with a primary intent of bringing balance to soil and the organic systems therein. Beyond this simple primary intent were no less than sixteen single-spaced pages of secondary, supportive, protection and closing statements that addressed such characteristics as elemental chemical composition and amino acid levels; contamination by specific pesticides, herbicides, insecticides, petrochemicals, toxins and radiation; and a variety of soil and plant enriching modalities.

### The Substrate

**Selection:** We also worked to locate a physical medium that could retain such complex programs with the longevity and intensity levels that we desired. We first examined pendant-sized stones with the intention of creating energy-enhanced jewelry, but soon found that the limited surface area present in a single stone was a bottleneck to the radiation of our imprinted energy program.

After some trial and error we found a successful substrate when we gathered crystals, minerals and mineral-grade gemstones intuitively at a local mineral show, then reduced them to the size of aquarium gravel using an inexpensive rock tumbler. We placed the minerals and gemstones in one-gallon glass jars that would fit within a Large Well that had been connected in-line with a Kelly Potentizer and a Personal Instrument. Not only did the large number of relatively small stones greatly increase the total surface area available for energy release, but the blend of minerals was revealed to provide a natural supporting mechanism; the mix of the energy patterns unique to each type of gem and mineral helped to balance the flow of scalar energy release.

**Clearing:** Before potentizing, the stones first needed to be cleansed of any programming that they may have obtained during normal handling. After washing them in water, we placed the gemstones in pans in the sun for the most powerful energy clearing possible.

### Potentizing

One at a time we potentized the primary, secondary and closing rates into the gemstones, imprinting the stones with the intent-defined energy patterns that we had developed.

Several interesting factors became evident during the potentization process:

- **Phase:** A handy rule of thumb for evaluating potentizing phase setting is that the “in phase” setting is used when an energy pattern is to be added to a system, while the “out of phase” setting is used to take an energy pattern out of a system. With programs of this complexity we quickly realized that the old rule of thumb did not apply – every line in the program had to be tested individually to identify the correct phase setting. With each and every item there were different potencies.
- **Stacking Order:** Whether mixing up fertilizer or baking in the kitchen, the order in which the individual ingredients are added makes a big difference in the final results. Similarly, we discovered that with complex potentization programs the order in which each program element was added to the imprint made a difference, with some elements even having the ability to erase the whole imprint conducted thus far. It was thus very important to dowse the final list of program steps in order to establish the correct stacking order.
- **Stages of Potency:** Novice radionics researchers often seek to deliver the maximum available power in every situation, however this approach does not always deliver the optimum result. Just as too much salt will spoil the dinner, too much of a given energy patten can spoil the outcome. For this reason, carefully checking and observing the degrees of potency was very important.

#### **Basics of Potentizing**

1. Set all dials on the radionic instrument to the desired rates, activating those banks.
2. Add any support mechanisms to the instrument’s input well or the signal input connector.
3. Test for in-phase vs. out-of-phase potentizing by checking for a stick with the switch in each position.
4. Test for optimum stages of potency by turning the potency dial until a stick is found.
5. Activate the amplifier on the radionic instrument, then test for duration of broadcast using the intensity dial.
6. After broadcast, retest for additional stages of potency and rebroadcast as necessary. When no additional stages are detected, potentization is complete.
7. Test resultant potency by checking impact to General Vitality or specific rates of interest.

## Bottling

After the potentization process was complete, we placed smaller amounts of the blended gemstones into small jars labeled with their primary intent. A higher state of energy release can be delivered merely by rolling the jars between your hands or shaking the stones inside. The jars are small enough to be carried within a pocket or purse, yet large enough to maintain a strong mass of energy.

## Results

Together Marianne and I were able to prove that it was possible to use an electronic potentizer to bind custom designed energy programs of almost unlimited complexity to a physical substrate. The results were so successful that gemstones processed nearly 15 years ago are still energized to their full effectiveness. It is a totally awesome process that can be done by anyone.

## Celestial Solutions Prayer Stones

KRT is proud to offer the Prayer Stones that Cathie Jordan still creates using the advanced potentization process she developed with Marianne Kelly. If you do not have time to create your own programs, consider trying one of Cathie's *Celestial Solutions Prayer Stones*:

- BUSINESS:** Designed to encourage and maintain a **positive, successful path** that is free from stumbling blocks.
- DENTAL:** Developed to enhance the **unique expressions of the self**.
- EARTH:** Used to **balance the soil** by burying open test tube(s) in the location(s) of interest.
- EYE:** Used to bring **focus, awareness and insight** to vision and other levels of perception.
- MEMORY:** Programmed to help **recapture lost moments** in time.
- PARASITE:** Devised to address issues commonly associated with **parasites** and parasitic action.
- PHYSICAL:** Created to **minimize the stresses** associated with minor general physical discomforts.
- PROSPERITY:** Developed to **enhance self-worth** of a person, place and/or thing.
- SKIN:** Designed to build and **grow self confidence** through appearance.
- WEIGHT:** Built for the underlying emotional and other patterns associated with **weight retention**.

**Celestial Solutions Prayer Stones.....\$25.00 per Jar, Bottle or Tube**

Jars are approximately 2 inches in diameter and 2 inches tall, with 20% to 25% available capacity filled with potentized mineral blend. Celestial Solutions Prayer Stones may lose their effectiveness if exposed to x-rays, strong magnetic fields or direct sunlight. These stones are intended to influence energy patterns, not replace proper medical or mental health care.

## Make Your Own Prayer Stones!

Anyone can make their own prayer stones using a Kelly radionics instrument, a Kelly Electronic Potentizer, a clearly focused intent and the process described above. Let KRT provide the supplies for the project:

**Glass Jars:** These straight sided clear glass jars are approximately 2 inches in diameter and 2 inches tall: perfect for your mineral blend, glass beads, sand or other inert substrates. They also make excellent containers for general radionic samples.

**Straight Sided Clear Glass Jars with Black Lids.....\$3.00 each -OR- 4 for \$10.00**

**Glass Jars with Mineral Blend:** Utilize the same handpicked blend of cleaned, deprogrammed tumbled minerals that Cathie uses to create the Celestial Solutions Mineral Blend. These "raw" minerals are ready for your unique programs and energy patterns.

**Celestial Solutions Mineral Blend.....\$10.00 per Jar**

# Facing a Health Challenge

When faced with life's health challenges it is important to remember and take action upon those sources of strength, energy and power that have brought us forward through the trials of the past. An excellent source of inspiration is waiting for those who will take the time to think, visualize, verbalize and then write down those power sources.

For example, here is an example of a small fraction of a list contributed by a long time friend and ally who has recently faced a serious challenge.

---

**God.** Be silent and listen. Make time to BE where it is quiet, safe and comfortable so that you can quiet the mind and reflect upon the messages that you are given.

**Spouse.** A spouse or significant other can be an extremely important source of comfort and understanding, a sounding board and partner in whatever challenge(s) you may have.

**Family and Friends.** Whenever there is a challenge in your life, the support and understanding of family and friends is so important to your maintain once at a solid level of comfort. A friend or family member who has been through a similar challenge can also offer the foundation and knowledge for you to develop your own protocol for addressing your own challenge.

**Call All Angels.** Depending on your belief system this may be something you may want to consider for your particular health challenge. Ask to be restored to that state of perfection from which you originally came.

**Medical System.** With a health challenge it can be vitally important that a proficient, qualified medical practitioner be found. This person or persons must have your confidence – someone who will listen and work with your belief system. Diagnostic tests may provide important information in order to establish your developing protocol.

**Alternative Medical Systems.** Consider any alternative systems that may impact your situation. Acupuncture/acupressure, massage, aromatherapy, music therapy, color therapy and many others are ancient arts used by billions around the world. In every case seek out qualified practitioners and remember to weigh carefully before choosing someone whose claims seem too good to be true.

**Responsibility for One's Own Health.** Each and every one of us must take the responsibility for our own health. It is not the responsibility of your health care professional. If you feel that your health care professional needs further investigation, do so. If your health care professional appears or seems upset by your choice than perhaps you need to seek out another health care professional. You are in charge, you steer the direction your care will take. You have choices – use them!

**Water – H<sub>2</sub>O.** Water is an extremely important item when considering health challenges. Good water is a must for both drinking and bathing. The use of a slice of lemon with the first drinking water of the day will help keep the body in good pH balance.

**Exercise.** Exercise can not be stressed enough. We must all exercise more and more each day. Walk or ride a bike to the post office or store. Find a beautiful park or garden to visit. Anything or anyway that would make mobility a priority in your life should be considered.

**Sleep.** This cannot be emphasized enough. The body needs to sleep in order to address any extremes and damages experienced while awake. Sleep is the time when the body repairs itself. And remember sleep is the most beneficial when done in the darkness (no lights) and away from electromagnetic interferences.

**Emotions.** Not enough can be said about the emotions. Keeping positive emotions flowing and eliminate the causes of negative emotions. These acts will improve health and the quality of life.

**Healing Touch.** Evaluate alternative methods or tools that can be used (or administered by qualified practitioners) that may assist you or become a part of your protocol.

**Belief System.** A belief system is a foundation in life. As we experience new things, our belief system may grow and adjust for the good of the individual. Think very carefully about any belief system that imprints limitations that sabotage the protocols used to fight the challenge.

**Supplements.** Take a look at and reviewing your supplements is extremely important when looking at health challenges. There may be new things that need to be added for your particular challenge and others than need to go based on your protocol.

**Antioxidants.** Although every diet should contain antioxidants, there may be a need to look at what you are taking or consuming that would be more beneficial to your current challenge.

**Meridians.** These are the pathways for the electrical system of the bodies. When there is a short circuit in the body's electrical system it can affect many areas other than the major challenge. Consider utilizing a traditional practitioner to restore and maintain the energy system.

**Elimination Systems.** Doing whatever is necessary to maintain the efficient function of the 5 internal elimination systems: kidneys, spleen, colon, liver and lungs. Do not forget to care for the body's largest elimination organ – the skin!

**Healthy Environment.** Do whatever is necessary to maintain a healthy environment for yourself. Keep in mind that living under power lines, next to a nuclear power plant or near a source of air pollution is not living in a healthy environment.

**Sunshine.** Despite reports to the contrary, we really need some sunshine each day. If we are outside with our garden then we are more than likely getting enough sunshine. Many who have routines, running errands, going to the post office and the like usually are getting enough sunshine. But those who do not get out doors are not getting this vital element of health, energy and cleansing.

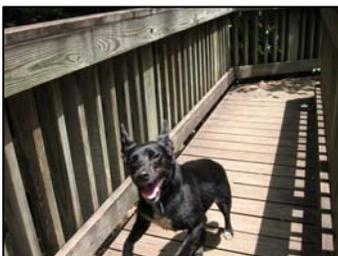

**Family History.** Remember to look to those family members who may have had similar challenges and study their fate. This can be very helpful if you are evaluating protocols. But it also can be devastating if you look to the outcome. Stay objective as hard as it may seem.

**Mental Awareness.** Many times when faced with what might be considered an insurmountable challenge, our mental attitude and awareness becomes crucial to our well being. If our attitude is depressed then our body finds it hard to consider being healthy. If we have limited our awareness and information, then we are limited by that knowledge and often find it hard to take responsibility for our own health. So many times we want someone else to fix it, like our health care professional. But the responsibility to investigate and research all our options is really our own.

**Attitude.** A person's attitude is perhaps the most important part of any challenge. How you perceive the challenge has a great deal to do with the outcome. A 'poor me' attitude sets the stage for a negative response to the challenge at hand. If it is perceived as just another hurdle to leap and learn from, everything moves in a positive direction.

**Patience.** This is often defined as the will or ability to wait or endure without complaint. In our current environment with all that life asks of us, it is extremely difficult to exhibit with patience. From the health viewpoint, developing patience is an absolute must.

**Love and Peace.** Keep love and peace part of your every day life, which in turn will help alleviate stress. All things encountered we should see with love and calmness.

*Bark less, wag more!*

**The Secret of Life**, according to a veterinarian friend of ours.
