View from the Dome

I apologize for the lateness of this "summer" issue when Fall has definitely fell! But it has been a wild summer at KRT!

Interest in our radionic instruments continues to grow around the nation and the world. This summer I taught the "Fundamentals of Radionics" course twice at the dome and again in Bismark, North Dakota, helping clients from all walks of life to become competent and confident in the use of their radionic instruments. During this time **we've shipped Replicators, Personal Instruments, Beacons and Workstations across the nation and around the world** thanks in no small part to interest generated by the free online manual we released this spring *Radionics Book 2: Applied Radionics*. Fully 45% of the visitors that come to the KRT website are from countries outside of the United States, with instruments dispatched to clients as far away as Poland, Indonesia and Mozambique.

Also this summer, Cathie and I attended the 36th annual conference of the United States Psychotronics Association, a not-for-profit organization dedicated to research, innovation and sharing in the esoteric sciences. Our founder, Peter J. Kelly, was a founding member of the organization in 1974, so **I was very proud to be elected to the Board of Directors** at this meeting. In this role I am advocating for freedom of information at every level, with an emphasis on building a forum in which folks can share ideas, challenges and solutions discovered in all their esoteric research. I also hope to drive this organization to better serve the needs of the countless radionics users out there, filling a void that currently exists in the United States. With past leadership by such greats as Dr. T Galen Hieronymus, Charles Whitehouse, and Peter J. Kelly the USPA has only to claim this throne. With our support this great organization will step up to bat and become a central meeting place for the radionic arts in North America through both an online presence and continuation of the annual meetings that allow people to meet face-to-face for lectures, workshops and friendship.

But wait, there's more! This summer we've also developed a new product! After countless requests from the radionics community, at long last KRT will produce an accessory tuning system that will allow users to instantly add new rate banks to existing radionic instruments. **The KRT Tuning Station adds four rate banks to any instrument:** three classic half-dial (180 degree) banks and a single round-dial (360 degree) bank. Our prototype testers in the field have revealed several applications for these versatile instruments, which are explored in a story beginning on page 5. Christmas is coming early this year, as we are also offering a special incentive to pre-order this new instrument before it is added to the website or the catalog. This photo shows the new Tuning Station instrument panel and case alongside a Beacon.

And things are not slowing down in the months ahead, either! On November 11th and 12th I'll be participating in **a special reunion workshop in Des Moines, Iowa, for all the students of Pat Schmidt**. This meeting has been organized by two of Pat's students - Marty Lucas and Kent Friedrichson of Every Advantage Consulting – with the blessing of Pat's brother Bill. The workshop will include intermediate-level radionic concepts and an opportunity to meet in a social setting with old friends.

Immediately preceding the reunion workshop, **on November 8th, 9th and 10th I will also lead a Fundamentals of Radionics course at the same location** for those new students that want to give radionics a try, as well as those "old hands" who would like a chance to brush up on the basics in a classroom environment. In that class we will focus on how to conduct basic analysis and balancing broadcasts, how to use worksheets, and building confidence with the radionic instrument.

These should be interesting workshops! Marty and Kent are commercial farmers who have tons of hands-on experience. Their work has been published in this newsletter previously, and **you can read Marty's essay "Unusual Reagents" on page 10 of this newsletter**. Anyone interested in signing up for either or both of these workshops should visit the Every Advantage website at: www.everyadvantage.net. Or you can always call them at 515-270-2300. The classes will be held at the Merle Hay Holiday Inn at 4800 Merle Hay Road, Des Moines, Iowa. Rooms may be booked by calling (515) 278-0271.

In February I will be appearing at the annual Soil Health workshop put on by our friends at Back To Your Roots Soil Solutions in Regina, Saskatchewan, Canada, to speak on the world of vibro-energetics. This event is scheduled for February 2 and 3. For more information please visit: www.back-to-your-roots.com

Finally, last but not least, on the weekend of February 18th and 19th KRT we will host **KRT's first-ever Radionic Crop Ag Symposium** in sunny Orlando, Florida! Unlike the traditional class where students practice specific techniques using their instruments, this workshop aspires to serve as **a round-table discussion for what works and what does not when using radionics in commercial crop agriculture**. Rather than a single lecturer, case studies will be presented informally by members of the group, who will share and answer questions about the real world results they have achieved results. Get away from the cold for a weekend in the Sunshine State at the first-ever Radionic Crop Ag Symposium, or bring the family and stay for a few more days in America's theme park capital for visits to Sea World, Universal Studios or Walt Disney World, among many other attractions!

None of this would be possible without the tireless enthusiasm, creative ideas and endless support all of you have shared with the KRT family over the last third of a century.

I *cannot wait* to see what we can achieve together next!

With kindest regards,

“Vitality & Wellbeing” Spagyric Elixir by Daniel Taylor

Having studied physics and chemistry, I have always been fascinated by their forerunner: alchemy. For example, a modern herbal tincture is usually prepared by simple maceration, suspension, and sometimes serial dilution; however, for ages, alchemists prepared “spagyric¹ elixirs” by first isolating and purifying the “quintessences” of the herb, and then recombining them in their “exalted” forms. They did this by taking the herb through the laborious processes of Calcination, Dissolution, Separation, Conjunction, Fermentation, Distillation, and Coagulation. Furthermore, they timed each step with respect to the Sun, Moon, Mercury, Venus, Mars, Saturn, and Jupiter, to impart (or omit) the appropriate celestial influences. In other words, a spagyric elixir should be a highly spiritual and subtle medicine.

This past year, a friend came to visit who had recently purchased a spagyric elixir for “Vitality & Wellbeing” from Celestial Alchemy², in New South Wales, Australia. This particular formulation (they have many others) contains Ginseng, Resihi, Gingko, Maca, and Yerba Mate, prepared in the manner I described above. They also claim to charge each remedy with Mantra, Pranic Energy, Reiki Energy, and Pythagorean Harmonics. Because my friend verified how effective it was, I became intrigued, and wondered if this might make a good radionics dispensary item.

I analyzed the bottle, and found that I could approximate some useful portion of the spagyric elixir’s frequency by using three banks on my Kelly Workstation. The settings were as follows:

74.46 – 03.89

27.57 – 40.27

87.50 – 64.64

This set of rates can be potentized into water, in-phase, stacking potencies as necessary. (They may also be broadcast.) Experimenting with water potentization, I noted a 25% to 30% “bump” in General Vitality (GV) for different cases. Becoming intrigued, I shared the rates with a colleague, who obtained similar increases in GV. While this “bump” may not be permanent if the “causes behind causes” are not being addressed, the results may still be substantial. I have found that this “Vitality & Wellbeing” spagyric elixir usually makes a great addition to other potentized remedies. I have also used it in a similar manner to the Bach Rescue Remedy, often “buying time” until further analysis can be completed.

Again, the formulation I analyzed was the “Vitality & Wellbeing” elixir. If you examine Celestial Alchemy’s website, you will note several others, including some for “Expanding Consciousness,” “Chakra Activation,” etc. Based upon these preliminary results, perhaps other Celestial Alchemy products might warrant analysis as well. I would enjoy hearing from anyone interested in doing so.

Lastly, if anyone is interested in learning more about Alchemy, you might enjoy *The Emerald Tablet: Alchemy for Personal Transformation*, by Dennis William Hauck, as a good general introduction. Robert Allen Bartlett’s *The Way of the Crucible: Real Alchemy For Real Alchemists* is more “hands on” and detailed. David Goddard’s *The Tower of Alchemy: An Advanced Guide to the Great Work* is definitely advanced and quite esoteric. There are numerous resources on the Internet as well, such as *The Alchemy Website*³.

1. The term “spagyric” was probably coined by Paracelsus, the noted Swiss physician (and alchemist), in the 16th century. The word’s roots are Greek: “spao”, to tear open, and “ageiro”, to collect. This became spagyricus in Latin.

COMING SOON: *The KRT Tuning Station*

The **KRT Tuning Station** was developed as a direct response to *your* requests for the ability to **expand the capacity of your radionic instrument** with auxiliary rate banks.

This accessory device is **designed for use with any full-featured Kelly radionic instrument**, including the Personal Instrument, the Seeker, the Beacon and the Workstation.

Simply connect the output jacks of the Tuning Station to the input jacks of your radionic instrument and immediately enjoy four additional banks on which to analyze and broadcast radionic rates. Likewise, the Tuning Station adds rate imprint and broadcast capabilities to the Repliator.

Take your subtle energy research to the next level with the addition of this powerful new accessory for use with your radionic instrument!

- **Standard: Four banks** of parallel plate capacitors that generate analog scalar waveforms as accurate as the sensitivity of the operator, with three half-dial (180°) banks and one round-dial (360°) bank.
- **Standard: No electricity required!** Like adjustable tuning forks, the parallel plate capacitors resonate with the information-as-energy that flows naturally from all organic and non-organic substances.
- **Standard:** Large, easy-to-read rate dial markings increase accuracy and user effectiveness.
- **Standard:** Beautiful **hand rubbed oak** cabinet, upgradeable to a custom laminate color finish.

Pre-order and save! Purchase your Tuning Station before 11/15 and save \$75.00!

THE KRT TUNING STATION: AN EXPERIMENTAL AGRICULTURAL TUNER.....~~\$750.00~~
Order before 11/15/2011.....\$675.00

UPGRADE! Personalize your Tuning Station with a custom laminate color finish for just **\$199.00!**

Why choose the KRT Tuning Station?

This accessory device brings seven new benefits to your radionic research.

Since taking over the business in 2006 there has been a continuous interest expressed in development of an accessory device that would allow additional rate banks to be added to the Kelly instruments. Exploration of this concept first began with careful consideration of how we used the single additional rate bank found on the three-bank Beacon and the Workstation instruments as compared with the two-bank layout found on the Personal Instrument and the Seeker. From there powered and unpowered prototypes were built and distributed to key clients for extended testing and feedback. Here are seven new uses and benefits that have been observed in the KRT lab and by our testers.

1. Expanded multi-bank analysis.

Radionic rates are signature tones whose vibratory (frequency) information sings in perfect harmony with the energy fields naturally emitted by the elements and compounds in the physical realm that we perceive as reality. Like matching tuning forks, the waveforms produced by the radionic instrument can sing in perfect unison with specific matter allowing identification and measurement of the relative strengths of each pattern of information.

When conducting a basic analysis using the *Plant Analysis*, *Water Analysis*, or any of the other worksheets that are available, the individual radionic rates must be tested one at a time. Taking an intensity reading for more than one rate at once will deliver a confusing result that does not report on the energetic strength of any one item, but rather an average of all of the rates set. But **in some situations averaging more than one type of vibratory information at a time can provide useful answers** to complex questions!

For example, one of the prototype Tuning Stations is being used by a Midwestern farmer who utilizes radionic analysis to select the seeds he will plant in the coming season. The most basic version of this test is to compare the innate harmonic relationships found between samples of soil and water from that farm and each seed being considering by taking readings of General Vitality (GV = 9.00-49.00) for each combination. Those seeds that have an inherently harmonious relationship with the soil and water at that farm will be indicated by a higher GV, which will in turn suggest an increased likelihood that a healthy crop can be developed. However, our tester pointed out that the classic version of this test only examined the first stage of development of the plant – the sprouting of the seeds.

In contrast, **using the four banks provided by the prototype Tuning Station allowed him to quickly compare all of the major phases of development for his plants**, including growth of the roots, stems and leaves. He did this by setting the rates for *all four* elements on the four banks of his Tuning Station:

Bank 1: Seeds	38.00-22.50
Bank 2: Roots	25.50-20.75
Bank 3: Stems	25.50-27.50
Bank 4: Leaves	42.25-44.50

By simultaneously checking the intensity of ALL of those factors, our farmer was able to identify those seeds whose harmonic relationship with the soil and water at his location will extend through the entire life cycle of those plants.

This technique may be used in a wide variety of situations in which the radionic researcher is seeking to compare and understand the impact of several characteristics at the same time. Since the Tuning Station is designed to be used as an accessory with a full featured radionic instrument, the actual number of rate banks available will be either six (when used with the Personal Instrument or the Seeker) or seven (when used with the Beacon or Workstation)!

2. Expanded multi-bank broadcasting.

The ability to double or triple the number of banks available for broadcasting can be a tremendous time saver! Rather than spending an hour setting three successive balancing broadcasts of 20 minutes each on a Personal Instrument, the addition of the Tuning Station allows all six rates to be set for a single 20 minute session.

However, it is important to *always* check to see if a multi-bank broadcast is appropriate before turning on the "Amp" switch. Simply dowse on the question with all rates to be used set on those banks and those bank switches turned on. Success is usually found when all of the rates being considered have a similar relationship and a similar desired outcome. For example, a researcher might consider broadcasting on several types of toxic conditions or pathologic patterns of energy at the same time with the intention of reducing all of them to zero. The same researcher may also consider setting multiple banks to raise the energetic strengths of several related elements in an organic system. However one would almost never want to simultaneously try to raise *and* lower the energetic at the same time. These combinations tend to produce "sour chords" that achieve nothing - or worse!

Another tester has been utilizing two four-bank Tuning Station prototypes, each connected to a Personal Instrument to give her a total of six banks per instrument. **"Farmgirl" uses radionics to nurture a total of more than 1,400 acres of cotton in North Carolina,** with one instrument dedicated to improving the health of the crop and the other focused on reducing the energetic strength of the weeds that threaten to steal energy and resources from the cotton. For example, she will set one Personal Instrument and the Tuning Station to rates selected for their ability to improve the health and welfare of the crops:

Bank 1: Air Circulation	23.00-31.00
Bank 2: Cell Division	21.00-44.80
Bank 3: Nutrient Availability	22.75-72.00
Bank 4: Oxygen	31.50-13.50
Bank 5: Photosynthesis	20.00- 4.20
Bank 6: Photosynthesis	33.60-22.90

Note: Photosynthesis is a two-bank rate – both rates are always used together.

Farmgirl clarified that it was important to figure out in which order to set the radionic rates on the banks of the instrument. "It's a puzzle... you have to play with the order to see which gives you the strongest intensity."

This is the concept of "stacking order", which says that it matters in which order the frequencies are set on the instrument. Think of it like baking a cake. Even though all of the ingredients in the cake recipe will end up in the batter, there is a specific order in which each should be added to make the thing go more smoothly. First we combine all the dry ingredients, then start adding the wet - the eggs, milk and butter. Reverse the order and your batter has lumps and requires more mixing. Similar examples exist in any situation

where recipes are followed: in the kitchen, the mixing tank on the farm, and industrial batch station. The same principles apply in radionics!

Finding the optimum stacking order is easy. When the rate order you wish to test is set on the instrument and all banks are on, check the intensity. Repeat this test with any combinations to be tested. **Choose the combination with the highest intensity for the balancing broadcast.** For whatever reason, this combination is the specific version of your chord of vibratory information that exhibits the highest state of energetic resonance with the soil, water and/or whatever else has been placed in the sample well.

Farmgirl uses the second Personal Instrument and Tuning Station to manage the weeds that would otherwise choke the cotton fields. But instead of working with known radionic rates and stacking orders, she “cold scans” for those radionic rates that will most significantly impact the energetic strengths of the morning glories, cockles and the two types of pigweed that grow in the area. Samples of each plant are placed in a large sample well where their vibratory pattern of information is captured by the coil in the well – the microphone of the system. Then she slowly scans through each rate bank to find the strongest resonance points for the combination of each weed and her focused intent: reduction of the energetic strength of those weeds to zero. Once located, she sets these anti-weed rates on each bank of her Personal Instrument and Tuning Station, then broadcasts for the amount of time dowsed on the intensity dial.

Cold scanning is easy. Place a witness or sample in the sample well from the organism you are seeking to impact energetically. Start with a rate bank set to 0-100 and turned on. Focus in crystal clear details on the outcome that is desired from the broadcast while slowly rotating the left-hand rate dial and lightly rubbing the reaction plate/antenna. Check the strength of each reaction detected using the intensity dial. When the strongest resonance point is located, leave that rate set on the left-hand dial and repeat the process on the right-hand dial. For a multi-bank rate, leave the first bank set to the first rate discovered and repeat the process on one or more subsequent rate banks. *The measured intensity should always climb with each additional dial scanned.* (Note: For a comprehensive look at accurate rate scanning, see *Scan Your Own Radionic Rates* in the Winter 2009 issue of this newsletter, available online here: <http://tinyurl.com/3s894u5>)

After the multi-bank rate has been discovered and the amplifier is turned on, the instrument begins singing this radionic chord out to the vibratory universe – a repeating station for the combined energetic patterns of the rates, reagents, samples and witnesses that were selected for broadcast. The broadcast is keyed back to the organism whose energetic state we seek to influence through the witness; the unique symphony of information that is encoded into that photograph or sample resonates in perfect harmony with the source organism as both are resonated with the broadcast energy.

When asked about the overall usefulness and effectiveness of the KRT Tuning Station, Farmgirl said the ability to broadcast on so many rates at the same time has made it possible to impact the energetic state in many more areas than would otherwise be the case. While the harvest is still upcoming at the time of this writing, her family is expecting to produce three bales of cotton per acre in an area where two is considered a good yield. Even more amazing, the land was on track to yield in excess of four bales of cotton per acre prior to being assaulted by the high winds and 13 inches of rain delivered by Hurricane Irene in August. **She credits the recovery and survival of the crop to radionics.**

3. Ability to scan high resolution rates.

Radionic rates are resonant tones that are keyed to the vibratory frequency information that defines the physical realm that we perceive as reality. Like identical tuning forks, each rate is like a signature tone that sings identically to a particular pattern of information. However, anything that we can see and touch in this physical world is infinitely more complex than just a single tone; even the simplest compounds are a veritable symphony of information-as-energy! For this reason, **the more complex a radionic rate, the more closely that rate can indentify and impact the physical object or organism the researcher seeks to balance** when he or she turns on the “amp” switch. This is comparable to the positive impact of using a high resolution digital camera when taking a photograph – the more information provided to the camera, the better the photo. As noted by the testers of the Tuning Station prototypes, when scanning for a radionic rate the more frequency information that can be captured on the rate dials, the more effective the resulting broadcast should be.

The parallel plate capacitors behind each rate dial are the adjustable tuning forks that allow perfect synchronization with each pattern of information-as-energy.

4. Expanded multi-bank potentiizing.

For all the same reasons that additional banks may be useful when broadcasting, the Tuning Station can bring new capabilities to those researchers conducting advanced, multi-rate imprinting of liquids and/or solids using an experimental electronic potentiizer by allowing several rates to be set at once.

Of particular interest to owners of the Kelly Replicator is the ability to use the Tuning Station in conjunction with that device to add radionic rates not only to creation of electronic potencies, but also during simplified broadcasting.

5. Add a round-dial rate bank to any instrument.

While the number of published round-dial (360 degree) rates is still relatively small, many intermediate and advanced users explore the unmarked area below the classic half-dial (180 degree) when cold scanning. The Tuning Station allows *any* Personal Instrument or Beacon to **grow with the abilities of the user by instantly adding round dial rate capabilities**, while Seeker and Workstation users will expand their round-dial rate setting capabilities with addition of this new bank. But what are the round-dial rates and how can they be useful to the radionic researcher?

Unlike the absolute frequencies used when setting an AM or FM radio where the settings are stated in cycles per second (hertz), radionic rates are defined as a percentage of the bandwidth accessible across the range of operation of the variable plate capacitors. Turning the rate knob adjusts the degree of interweaving of the tuning plates from “not at all interwoven” (“0” on the rate dial) to “completely interwoven” (“100” on the rate). This is why radionic rates start at zero and end at 100; the numbers reflect the percentage of the total accessible range, not an absolute frequency.

0% interwoven =
“0” on the rate dial

100% interwoven =
“100” on the rate dial

66% interwoven =
“66” on the rate dial

66% interwoven =
“-66” on the rate dial

Understanding the mechanical operation of the tuning capacitors clarifies the fact that although we use of the term “negative” to describe the rates found on the lower half of the round dial, this word should not be misunderstood to suggest there is anything bad, unwholesome or evil about this lower range. Within the context of the rate dials, the term “negative” merely describes the other half of the scalar waveform that is being generated by the radionic instrument.

As such, the addition of the enumerated dial on the instrument panel simply allows the intermediate and advanced user to document those resonance points discovered in the lower area of the dial during scanning – the resonance points that exhibit the strongest harmonic relationship with the combination of witnesses, samples, reagents and any rates set on other banks of the instrument. Documentation of the new round-dial rates will allow them to be reused, shared and compared with other researchers in the radionic community. In this way, the body of published round-dial rates will grow for the benefit of all users.

6. Convenience when using rates repeatedly.

When conducting a radionic analysis, there are invariably rates that are used many times throughout the process, such as General Vitality (9.00-49.00), the “Yes/No” setting (100.00-0.00) and the “Open” rate (0.00-100.00). When using the two banks on a Personal Instrument, the researcher invariably ends up resetting these rates many times in between broadcasts. When using the Tuning Station prototypes, our testers reported enjoying the convenience of being able to leave a bank set to one of the rates that they were using repeatedly. Rather than having to reset the dials each time they could simply turn on the bank and check intensity, then turn it back off until needed the next time.

7. Large, easy-to-read rate dials.

The Tuning Station utilizes the same 4.75 inch (12 cm) diameter rate dials that are found on the *Seeker*, *Beacon* and *Workstation*. If you find yourself straining to read the smaller digits found on the Personal Instrument, you’ll appreciate the convenience of using these larger dials.

Unusual Reagents by Marty Lucas

If you've used your instrument very much at all, you have probably worked with reagents. Using reagents speeds up the balancing process and gives you a tremendous amount of flexibility. You may even have an entire cluster of test tube racks of assorted liquids and powders that you regularly use when you are balancing. But are you using all of the types of reagents you could be using?

Remember, whether it is a liquid or a solid, all we are looking for is the information about the substance. With that in mind, there are a lot of information-type reagents that work very well. For instance, a Gideon's *New Testament* fits nicely into the well and can be an ideal 'reagent' when you don't know exactly what to do, but need 'something'.

In fact any book, pamphlet or other written material will act not only as a witness, but as a reagent as well. I prefer holy books because of the almost universal good results. However, songs and hymns have a lot of good positive information as well.

CD's and DVD's work, but you need the large well for them. I especially like a CD with a copy of the Jewish Kabbalah. In many cases this single CD can cut my balancing time by 80%. (If you haven't bought a large well yet, just do it, you are going to need it anyway.) Of course, with any of these religious and spiritual 'reagents' they only work when you are balancing for the higher good. They will not help you to 'kill weeds' but then you shouldn't be trying to kill anything anyway.

Each of the heavenly bodies has its' own unique energy signature. Depending upon the project, you may need a picture of Mars, or perhaps of Venus. Don't overlook the NASA pictures of galaxies. Several of the galaxy pictures have unique and powerful properties.

Other powerful 'energy' images are pictures of crop circles. Collect as many pictures as you can, each one has different properties. Go through your old alchemical references, many of the symbols are still quite useful.

In fact, anywhere there is a symbol there is energy associated with it. Some of it is positive and some of it is not. Many symbols are simply too loaded with dark energy to be of any use in my work. However, for sources of imagery look for: Christian, Mayan, Wiccan, Masonic, Inca, Egyptian, Hindu, Muslim, Chinese, Greek, Viking, Irish and Rosicrucian.

We have all used sacred geometry and the flower of life. Don't overlook mathematical formulas. Is there a better energy formula than $E=MC^2$?

The Hebrew alphabet and Sanskrit are particularly powerful, especially when you use a combination of the letters. English letters have very little energy by themselves, but work well when you combine them into words (love, peace, spirit, etc). Viking Runes work, but are much more limited.

Another powerful group of reagents are essential oils. Don't scrimp and buy cheap imitations, use the good ones and always have an assortment on hand. Of course you now realize that the label off of the essential oil is nearly as effective as the oil itself.

If you really like to experiment, try this:

Take your inexpensive telescope and point it whatever target you want in order to capture the energy. The sun, for instance, is very powerful, very stimulating and very cleansing. Then train the eyepiece into your input well. I find the sun to be too powerful for me to work with this way; however, the moon is perfect and each phase of the moon has a different energy. Another way to use the telescope is to clearly formulate what energy you need and then dowse where to point it. That way you don't have to have any particular knowledge of the energy characteristics of a planet or star and you can still get the energy you need. The advantage of this method is that you can pick up energy from things you had no idea were even there.

While we have gone this far, you might as well know that your telescope can work just as well on the output to increase your broadcast power. For example, scalar energy like to 'ride along with' light. Experiment with this, but be careful, some of the targets you aim at will shift your broadcast out-of-phase. Always check to see if whatever you are doing will be effective and is appropriate.

You may already be using crystals as reagents. A major advantage of crystals is the capacity to program them with frequencies. Don't overlook river or field stones. These rocks have been around for a long time and have unique properties not only because of their size and structure, but also because of the energies they have absorbed over the years. (A field stone can tell you a tremendous amount about the field it came from.)

There is another class of reagents that deserve a lot of your attention: sound. Solfeggio tones, the human voice, even straight frequencies as broadcast through a speaker. IF you are ready to go a little further out, try this experiment.

Your words and your voice are simple forms of informational energy. What better reagent than your voice? Analyze a food sample. Then on a 1-100 scale rate it as to how nutritious it is for you. Put the food into the input well, set your instrument for 0.00-100.00 – broadcast. Now simply say grace into your input well. When you retest the food sample, the results will amaze you.

Have fun and keep 'smiling and dialing'!

Marty

Check for Implant Mechanisms

Two radionic researchers recently reported that they have had success dealing with difficult balancing situations by testing for the presence of implant mechanisms – the armoring of the organism through the seven chakra originally described by psychiatrist Wilhelm Reich. Examples of difficult situations include broadcasts that do not lower the energetic strength of a negative condition as expected, or cases where the intensity of the negative condition is temporarily lowered but very quickly returns to its previous strength.

Specific steps to take:

1. Set the rate that is not moving on one bank of the instrument.
2. Dowse to identify the implant mechanism(s) that may be impeding the flow of energy.
3. Set the rate for the implant mechanism on the second bank* of the instrument.
4. Recheck intensity to see if the combination of rates reduces the energetic strength of the negative condition.
5. Turn on the amp and check for broadcast time on the intensity dial.
6. Broadcast for the amount of time recommended and no more.

Implant mechanism rates may be found on page 2 of the *Psychic Attack* worksheet, which was included in the Winter 2011 issue of this newsletter (Vol. 5, No., 4), as well as with every copy of the *KRT Electronic Rate Book*.

* **Note:** Many implant mechanisms are four dial rates and would require two additional banks to set.

Farewell Katherine Anne Larsen

At the U.S. Psychotronics Association meeting we were deeply shocked and saddened to learn of the untimely passing of our friend Katherine Larsen after a valiant battle with cancer, just one day before the conference was scheduled to begin.

Katherine's wisdom and knowledge was well known to readers of *The Radionic Homestead Report*, which she published bimonthly with her mother, the well-known radionic researcher and teacher Lutie Larsen. Katherine was also responsible for much of the day-to-day business associated with their work at Little Farm Research. If you've purchased a copy of one of the Little Farm Research rate books in recent years, it was most likely Katherine who did the copying, collating and binding behind the scenes.

For us at KRT, she was a good friend and active collaborator in helping each other to succeed and prosper, while always working to move radionics forward for the good of all people. We will miss her cheerful voice on the other end of the phone, as well as her practical approach to handling the logistical and other challenges that sometimes arose.

Rest in peace, Katherine. You are deeply missed by all of us you left behind. Our kindest wishes go out to Lutie and the rest of her family.

Katherine Anne Larsen was born May 3, 1965 in Houston, Texas. She passed on Friday, July 16, 2011. She was the first child of Steven and Lutie Larsen. Her family, her eight brothers and sister loved her dearly. Katherine is preceded in death by her father.

THANK YOU FOR YOUR ORDER!

Pat Schmidt Reunion Workshops: Des Moines, Iowa

KRT is very pleased to be participating in the reunion workshops organized for the students of Pat Schmidt by Marty Lucas and Kent Friedrichson of Every Advantage Consulting. Marty and Kent worked side-by-side with Pat through many projects and have a working knowledge of radionics and the land. A pair of workshops will serve the needs of beginners and experienced users alike, while also promoting conversation about the radionic arts and a spirit of community amongst the attendees.

BEGINNER RADIONICS CLASS: November 8-10 Des Moines, Iowa

Course will be lead by Ed Kelly, President of KRT. Son of radionic pioneer Peter J. Kelly, Ed is a uniquely qualified instructor with years of experience building radionic instruments, working with senior instructors, and writing about this amazing field. A course designed to meet the needs of brand new beginners and experienced users that want to brush up on the basics. Topics include:

- A Brief History of Radionics
- Radionic Instruments: Theory of Operation
- The Operator and Focused Intent
- Safe Use of Radionics
- Capturing Effective Witnesses
- Operation of the Kelly Instrument
- Energetic Analysis and Balancing
- Water Analysis Worksheet
- Animal Analysis Worksheet
- Plant and Soil Analysis Worksheet
- Use of Reagents: Physical and Electronic
- Basic Rate Scanning/Electronic Dowsing

Each participant will be provided with following materials and information.

- *Radionics - Book 2: Applied Radionics*
- Set of 10 radionic worksheets by KRT
- Two 300 ml Griffin beakers
- One year: *Kelly Research Report*

Participants should bring samples of the water they drink and fur/hair from an animal they own.

Beginner Radionics Class

\$599.00

PAT SCHMIDT REUNION ADVANCED CLASS: November 11-12 Des Moines, Iowa

Marty Lucas, Kent Friedrichson, Ed Kelly and other guests will cover intermediate and advanced topics for use by experienced users. The emphasis will be on providing practical information that can be used right away to improve sensitivity, increase effectiveness and generate results. Specific topics will include:

- Soil and Seed Balancing
- Electronic Potentizing
- Improving Crop and Livestock Health
- Making and Using Reagents
- Unusual Reagents and Symbols
- Scanning Accurate Rates

A portion of the proceeds for this class will be donated to Pat's designated charity, the Holy Name Retreat House in Green Bay, Wisconsin.

Pat Schmidt Reunion Advanced Class:

\$199.00

Enroll: To enroll in either course, please contact Every Advantage Consulting at 515-270-2300, or enroll online at: www.everyadvantage.net

Where: Merle Hay Holiday Inn at 4800 Merle Hay Road, Des Moines, Iowa. (515) 278-0271

When: Classes will run from 8:30 am to 5:00 pm each day, with breaks.

Bring: All courses are hands-on experiences that require a radionic instrument. Bring yours, or *please order as soon as possible if a new instrument is required from KRT*. A limited number of Kelly Personal Instruments will be available for rent for a fee of \$25.00 to those participants who want to try radionics for the first time.

Food: Light refreshments will be provided during class. Participants will be responsible for their own meals. A variety of restaurants is available in the area.

NOTE: The universal radionic concepts covered in class will equip participants to conduct radionic research in any area of interest. However, human health issues cannot be covered at any time. Regrettably, any questions concerning human health will have to be declined.

Other Upcoming Events

Ongoing: Conshohocken Radionics

Conshohocken, Pennsylvania

Pennsylvania Pete's group now has 41 members and hosts regular meetings, classes and discussion groups on radionics. According to a recent post at their MeetUp page, they have recently built a working prototype for a radionic instrument of their own design! Very exciting work being done by this group! Find out about upcoming events at: www.meetup.com/radionics

Ongoing: Wisdom Quest Group

Western Ohio

Bruce M. Forrester's Wisdom Quest Group brings together an active membership and experts on a variety of esoteric and mainstream topics. Find out about upcoming Wisdom Quest events at: www.zephyrtechnology.com/html/wisdom_quest_group.HTM

November 2-3: Intense Beginners Radionics Course

Mazomanie, Wisconsin

Learn about life's energies with Megan Dettloff-Meyer LAc, MSOM. Megan is a Licensed Acupuncturist with a Master of Science in Oriental Medicine. She will share her perspective on radionics. Radionic instruments are required for class. A limited number of Kelly Personal Instruments are available for rent for those individuals who want to give it a try. Bring supplements or vitamins along for analysis. Course fee is \$375.00 Instrument rental is \$25.00 For more information or to enroll please contact Megan: (608) 795-0173 home (608) 797-2638 cell mwdettloff@gmail.com

February 2-3: Soil Health Workshop

Regina, Saskatchewan

Back To Your Roots Soil Solutions provides consumers with access to environmentally friendly products that address soil problems and facilitate sustainable farming practices. In an extension of their daily mission, Back To Your Roots' annual workshop brings together top experts from all areas of agriculture to identify the underlying causes of soil problems and develop ways to correct them. Ed Kelly will present on the vibro-energetic qualities of the world as we know it.

February 18-19: KRT Radionic Crop Ag Symposium

Orlando, Florida

Spend a winter weekend in the Sunshine State learning and sharing information with the other farmers who want to talk about the nuts and bolts of radionics and successful crop agriculture. Unlike the traditional class where students practice techniques using their instruments, this workshop will be **a round-table discussion on the use of radionics in commercial crop agriculture** with case studies presented informally by members of the group, who will share and answer questions about the real world results they have achieved. Bring the whole family and stay for a week! Orlando is theme park capital of the world, with countless other attractions, shopping and family fun. Best of all the average February temperature in Orlando is 74 degrees! Workshop fee is \$199.00.

March 1-3: Intermediate Scanner Technology

Ankeny, Iowa

Ginny Blankenship is organizing a class in Ankeny, Iowa. Ginny was a fellow student and assistant teacher with Pat Schmidt for the last 5 years. Pat repeatedly recognized Ginny as his protégé to workshop participants and clients. She brings a healer's perspective to her radionics, with years of experience and certifications in several energy modalities. Class will be scheduled based on interest from potential participants. Please contact Ginny at 573-680-5940 or visit her website at www.woodswalker7.com. Fee will be \$450.00 for this course. Says Ginny, *I will bring to my class what I learned from my wonderful teacher Pat Schmidt. I also will share what I have learned in the energy healing world. In class I hope to expand on the mental, emotional, spiritual, and physical aspects of healing using a step by step process that utilizes radionics to its fullest potential.*

July 2012: U.S. Psychotronics Association Conference

Columbus, Ohio

Meet Cathie Jordan and Ed Kelly at the 37th annual meeting of the U.S. Psychotronics Association, the organization co-founded by KRT's Peter J. Kelly to share innovations in of science, alternative health, consciousness and radionics. More information will be posted here and at the USPA website as details emerge. Please visit: www.psychotronics.org.

Education is a better safeguard of liberty than a standing army.
