## *View from the Dome*

Welcome to 2012!

The New Year is already destined to be filled with both challenges and opportunities for all of us - as individuals, as communities and as a planet. Beyond the usual struggle for health, happiness and prosperity are concerns over what will happen when we reach the end of the current 5,125-year-long cycle described in the Mesoamerican Long Count calendar, more commonly known as the Mayan calendar. By now I think we have all heard from many people who are convinced that the world will be ruined or destroyed at the end of the cycle. However, I have met an equal number who believe that we are poised to enter a new era of peace, love and spiritual transformation here on Planet Earth.

Supporting the latter idea has been a series of breakthroughs in mainstream science and engineering that support several of the core assertions made in radionics. A couple of these are summarized in this issue, including a story on the use of harmonic resonance to broadcast electricity without wires (see page 3) and a story on the quantum teleportation of DNA molecules from one test tube to an adjacent one when driven by a weak electromagnetic field (see page 9). Even on the very day that I am writing to you my wife came across an article on the New Scientist website (see: <http://tinyurl.com/7mmzxa1>) that describes new "nanophone" technology that allows researchers to *listen* to the vibratory properties of individual cells using a combination of lasers and nanoparticles for the first time. One finding described in the same article was that red blood cells infected with the malaria parasite vibrated with less energy than an uninfected red blood cell – a conclusion that even the most novice radionic researcher could predict!

The announcement of these discoveries in the popular press makes me hopeful that mainstream and esoteric sciences are converging in a way that will finally bring radionics into the light after decades of misunderstanding and even persecution. Indeed, perhaps the end of the current Mayan calendar describes a new era of limitless power and information-as-energy first described by Nikola Tesla way back in 1904!

For my part, I believe that our destiny is largely in our *own* hands and hearts, that each of us has the power to make a difference in the world around us through positive action guided by kindness and compassion.

# Large Sample Wells

The sample well is the microphone of the radionic instrument. The subtle energy patterns emitted by samples, witnesses and reagents resonate the helix of flat copper coils, producing an analog signal that is delivered to the tuning capacitors for analysis or broadcasting.

The Large Sample Well has been a staple of the radionic laboratory since the 1980's, when farmers complained that they were spending too much time squeezing samples of bulky materials into small beakers and test tubes. Likewise, potencies destined for use in tanks, sprayers or troughs needed to be made by the gallon rather than the ounce. At that time a source for 8" diameter acrylic was located – a size large enough to allow either a 4.0 liter Griffin beaker or a typical milk jug to be placed directly into the well.

First invented in 1928, acrylic is a transparent plastic that has many excellent properties, including durability, shock resistance and ease of care. It is also optically pure and provides an excellent basis for the coil sample wells we produce. However, like any plastic, acrylic is more sensitive to scratching and may degrade over long periods (decades) of use. It also does not provide the same level of acoustic resonance as glass, an important factor when capturing frequency information.

Invented in 1915 and trademarked as Pyrex, borosilicate glass remains the standard for laboratory glassware after nearly 100 years, as it shares none of the disadvantages of plastic – it will truly last a lifetime with zero degradation. Of greater importance to radionic researcher, glass exhibits a much higher level of acoustic resonance than plastic. A demonstration of this characteristic can be found by tapping the side of a wine glass to produce a musical note, while tapping a plastic cup produces only a dull thud. In radionics, this natural clarity of resonance can be important when capturing the subtle frequency information from samples and reagents.

While we have offered a Pyrex option for small sample wells and instruments for nearly 30 years, until now we have never found a vendor who could provide Pyrex tubing large enough to make a large sample well at a cost-effective price. This tubing is made by the inventors of the material – Corning Glass – then cut to size and fire polished by our vendor. The result is a large sample well for those radionic researchers for whom clarity and accuracy of frequency information is a primary concern. **Now you can choose the Large Sample Well that is right for your research!**

- Large Acrylic Sample Well..... \$250.00
- Large Pyrex Sample Well..... \$400.00

# Wireless Power Transmission Now a Reality

In the September 2006 issue of the *Kelly Research Report* we described the impending arrival of totally wireless transmission of electrical power through the use of electromagnetic resonance, in which electricity is transmitted through the air between energy sources and devices that are coupled by identical frequency characteristics. These predictions of the future are now reality, with several firms and inventors offering prototypes of wireless power systems first described by famed inventor Nikola Tesla in the March 27, 1904, issue of the *New York Times*.<sup>1</sup>

For example, *Popular Mechanics* reported the exhibition of a wireless car charging station at the 2011 International Consumer Electronics Show, in which a Tesla Roadster – a high performance electric sports car powered by 6,831 lithium ion batteries – was charged by a lightweight charging plate placed on the floor four inches below the bottom of the car.<sup>2</sup> While complete charging of a totally drained battery array was estimated to take 48 hours, this system provided clear proof of the concept. The technology is expected to play a key role in the eventual adoption of electric vehicles by the public, as it eliminates the need to remember to plug the vehicle into a special cord or station. Instead, simply park the vehicle atop the charging plate and electricity begins to flow automatically.

Several companies are developing wireless power transfer technology. Rachel Kaufman described the systems being developed by WiTriCity Corporation in *Scientific American* on October 28, 2011.

*The process relies on a principle called magnetic resonance coupling. The charging device, made of a coiled wire with capacitance plates on either end, uses electricity to create a magnetic field that resonates at a specific frequency. Just as an opera singer can shatter a wine glass by singing the right note, the emitting coil transfers energy only to a receiving coil that resonates at the same frequency. Magnetic resonance coupling is thought to be safer than other methods of wireless charging because the intensity of the field can be increased without affecting other, non-resonant objects nearby.*<sup>3</sup>

This means that the charging device will not erase the user's credit cards or generate otherwise unwanted electrical fields – only the automobile with the resonant receiving coil will receive a flow of current.

Approaching the idea of wireless power transmission from a different angle is 22 year old Meredith Perry, founder and CEO of UBeam, a firm that uses ultrasound – sound above the level of human hearing – to create electricity by resonating the crystals in a piezoelectric transducer. In April of 2011 Ms. Perry won the University of Pennsylvania's "PennVention" invention competition and innovation fair only a few months before graduating from the institution.<sup>4</sup> The UBeam technology is expected to be used with smaller devices like cell phones, laptop computers and other electronics, charging numerous devices at the same time with a 20 to 30 foot range. It consists of a charging station that plugs into the wall and emits energy, and an energy-absorbing adapter that plugs into a USB connector.

Meredith Perry (left) and partner Nora Dweck pose with the UBeam prototype.

**These are just some of the examples in which mainstream science and engineering are converging on one of the central principles of radionics – that energy can be transmitted to specific organic systems or subsystems when the core resonant frequencies of those systems have been identified.**

## Accessing the Chakras in Any Auric Body by Daniel Taylor

In thinking about utilizing more banks to fine-tune frequencies for greater effect, I have recently done some experimentation with the Chakras. Using one of the traditional worksheets, based upon information from Charles Whitehouse, we have seen a series of two-bank rates: one for the Chakra in question, and a second for Petals In, Stem, Petals Out, or the Synchronous rate.<sup>1</sup> While I have used these effectively, it has recently occurred to me that these rates are primarily addressing issues in the Physical Auric Body. This might be well and good, but the "root" of the problem may not necessarily lie there.

J.G. Gallimore, Charles Whitehouse, Bob Beutlich and KRT founder Peter J. Kelly conduct a roundtable discussion at a U.S. Psychotronics Association meeting.

As a case in point, I recently worked with an organism having at least one type of blockage in each Chakra from the Solar Plexus clear up to the Crown. Balancing on the two-bank rates for each Chakra did not prove to be long-lasting in effect, and was also time consuming. Having done the ACES worksheet,<sup>2</sup> I was aware of some low intensity readings in one of the Astral Auric Bodies. Following this lead, I attempted to analyze the Chakras in that Astral Auric Body. When I did this, I found there was only one blockage affecting only one Chakra, the Crown. More interestingly, when I balanced this, the issues with the five Chakras in the Physical Auric Body seemed to "auto-correct" as a result! This was a real time-saver for this particular case, and the effectiveness was quite observable.

An example of what this might look like on an instrument follows:

Bank 1: Astral II	87.00 – 69.00
Bank 2: Crown	36.00 – 56.00
Bank 3: Petals In	10.50 – 28.00

Similarly, Bank 3 could also be set to: Entrance Blockage (12.25 – 12.75) if that were the issue at hand. Likewise, additional banks can be cold-scanned and added if appropriate to increase resolution.

Using this approach, we might theoretically be able to access the Chakras in any Auric Body. For some cases, this might prove to be more efficient in the long run, by getting us closer to the root of the problem.

### Notes:

1. For more information on the parts of the Chakra, see the Chakra Balancing worksheet, found in the KRT Electronic Rate Book's Worksheet Library. This worksheet also provides other rates for the second bank, such as Energy Entry Blockage, Exit Blockage, etc.

2. Aura + Chakra + Elimination + Support ("ACES") is also a worksheet in the KRT Electronic Rate Book Library.

# BASIC RADIONICS: The Silver Sephorah Signal Multiplier

Like virtually all classic radionic devices, the instruments developed by KRT founder Peter J. Kelly during the early 1970's included a simple air-core induction coil that provided a passive (non-powered) boost to the energy-as-information signal strength. Nearly 30 years later he would transform the effectiveness of this ubiquitous feature by sheathing it with a silver Faraday cage in the form of a Sephorah.

## The Faraday Cage

First invented by the English scientist Michael Faraday in 1836, a Faraday cage is an enclosure made of conducting material that dissipates external non-static electric fields. Other examples of Faraday cages include the cooking chamber inside a microwave oven and the patient scanning room in a Magnetic Resonance Imaging (MRI) system.<sup>1</sup> By enclosing the radionic instrument's induction coil inside a Faraday cage made of the highest possible quality silver - 99.9% pure - Kelly eliminated external electrical interference that could distort or otherwise interfere with the subtle energy signal information passing through the coil.

The inspiration for the specific shape of the Faraday cage utilized - a rectangular prism with pyramidal ends - sprang from Peter Kelly's research into the Kabbalah, the set of esoteric teachings from 11<sup>th</sup> century Judaism that were meant to explain the relationship between an eternal and mysterious Creator and the mortal and finite universe.<sup>2</sup> It was within those ancient texts that he found the mystical symbol called the Sephorah.

## Pathway to the Physical Realm

The Sephorah (also spelled *Sefirot*) is the symbol used to describe the pathway to God and describes the manner in which He created the world *ex nihilo* (out of nothing).<sup>3</sup> In many religions the story of creation is filled with metaphor, however the Sephorah is consistently described not as a story but as a *diagram* - a map of 22 pathways connecting 10 points, each of which explains one of the specific stages by which "divine energy"<sup>4</sup> is transformed into the physical matter of the universe in which we live. Of particular interest is the fact that Kabbalists do not envision time and space as pre-existing - instead these are phases of existence that come into being as specific post-kindling stages on the Tree of Life. Later stages depict the binding and recombination of energetic materials until they are so dense that "pure, limitless energy is 'solidified' into the physical universe".<sup>5</sup>

The air-core induction coil in a vintage Kelly Personal Instrument. To the right is an early solid-state amplifier board.

Today the air-core induction coil is surrounded by the silver Sephorah and integrated with the amplifier board.

The Sephorah as depicted in the Kabbalah compared with the Sephorah on the Kelly Workstation motherboard.

All of this should sound extremely familiar to the radionics researcher, who understands the process by which the focused intent of the trained operator is used to drive detection, assessment and transmission of scalar energy waveforms between specimen and source using the radionic instrument as the mind-matter interface. Just as the Kabbalah describes the birth of physical reality from divine energy, the trained operator uses the radionic instrument to pre-engineer physical reality by tapping into the boundless gulf of universal energy at the null point before linear time and physical space exist.

In this way the silver Sephorah found at the heart of every KRT radionic instrument serves as a geomantic signal multiplier, meaning simply that the specific properties of this enclosure (such as the lengths of the sides and the angles at which they connect) dictate the focal and intersection points of the energy being reflected from corner to corner and along both the inner edges and planar surfaces of the Sephorah.

### Geomantic Signal Multiplication

In the same way that the geomantic properties of the optical lenses in a telescope determine that telescope's focal point and magnification strength, the shape and size of the silver Sephorah dictates the degree of signal focus and information density as the scalar energy is reflected from point to point along the 22 pathways described by the Kabbalah. Placing the Kelly radionic instrument's induction core coil at the center of this ancient signal multiplying and focusing device delivers the researcher's radionic information directly to the pre-physical place of kindling, the null point found at the first stage of the Sephorah.

Energy pathways intersect at focal points in the center of the induction coil in this simplified diagram.

### Signal Input for Maximum Flexibility

The last transformative element to be introduced with the silver Sephorah technology was the auxiliary signal input – a seemingly simple modification with profound implications for the scope and versatility of the Kelly family of devices. While the sample wells used with Kelly radionic instruments are excellent for detection of the subtle energy patterns of information emitted by witnesses and reagents, early Kelly instruments had no means for introducing external waveforms such as Rife frequencies, music or other electronic signal information to either the analysis or the broadcast. This was rectified by placing a strip of silver tied to a conducting wire at the center of the induction coil, with a second conducting wire fused directly to the shell of the Sephorah. When signal information is introduced through the BNC-type “Signal In” connector on the radionic instrument the two elements directly resonate the coil between them, thus seamlessly integrating the electronic signals with the patterns of information-as-energy passing through the coil.

The induction coil and silver resonating strip are visible inside the Sephorah. The green wires tie the strip and the Sephorah to the “Signal In” connector.

## Conclusions

As a result of these improvements, Kelly radionic instruments now stand as universal subtle energy testing platforms with the capability to assess, analyze and broadcast to and/or from *anything* that can be photographed, placed in a test tube, or sent through a wire.

The signal focusing and intensifying properties of the silver Sephorah deliver improved accuracy and increased information density, especially in the presence of external interference. Other benefits include a consistent reduction in dowsed broadcast times, as well as a decrease in the rate of repetition required to address recurring issues such as water contamination, efforts to modify soil composition and virtually any effort to cultivate life in a world permeated by chemical products, poisons and pollution. An overall increase in instrument effectiveness has also been observed by those researchers working in areas of excessive or fluctuating magnetic fields, both natural and artificially generated. Only Kelly radionic instruments offer the unique benefits generated by the ancient silver Sephorah technology.

## How often do you quote Shakespeare?

You probably think that only literary scholars quote the famous 16<sup>th</sup> century playwright William Shakespeare, who wrote such classics as *Romeo and Juliet*, *Hamlet* and *Macbeth*. But he is credited with the invention of literally dozens of words and phrases that are now part of our everyday vocabularies. Here are just a few examples of well-known sayings:

All that glitters is not gold  
All's well that ends well  
Be-all and the end-all  
Brave new world  
Break the ice  
Breathed his last  
Refuse to budge an inch  
Cold comfort  
Crack of doom  
Dead as a doornail  
Dog will have his day  
Devil incarnate  
Eaten me out of house and home  
Faint hearted  
Forever and a day  
For goodness' sake  
Foregone conclusion  
Full circle  
The game is afoot

The game is up  
Give the devil his due  
Good riddance  
It was Greek to me  
Heart of gold  
In a pickle  
In my heart of hearts  
In my mind's eye  
Kill with kindness  
Knock knock! Who's there?  
Laughing stock  
Love is blind  
Melted into thin air  
Much Ado About Nothing  
Naked truth  
Neither rhyme nor reason  
Not slept one wink  
One fell swoop  
Own flesh and blood

Star-crossed lovers  
Parting is such sweet sorrow  
Pitched battle  
Play fast and loose  
Pound of flesh  
Seen better days  
Spotless reputation  
The short and the long of it  
Set my teeth on edge  
There's the rub  
To thine own self be true  
Too much of a good thing  
Tower of strength  
What the dickens  
Wild-goose chase

# An Unusual Reagent: The *Ana BeKoach*

Our friend Daniel Taylor recently drew our attention to the *Ana BeKoach*, which is a prayer from the Kabbalah - the set of esoteric teachings meant to explain the relationship between an eternal and mysterious Creator and the mortal and finite universe (His creation). While the Kabbalah was first systematized in between the 11<sup>th</sup> and 13<sup>th</sup> centuries,<sup>1</sup> the *Ana BeKoach* was written down in the first century by a great kabalistic Rabbi named Rabbi Nehonia.<sup>2</sup>

The *Ana BeKoach* is composed of seven lines, with six words in each line. Each line relates to the seven Sepherot of the Tree of Life, as well as the seven days of the week. It is represented by the seven leaf Menorah – the lampstand used in the ancient Tabernacle in the desert and Temple in Jerusalem, a symbol of Judaism since ancient times and the emblem of the modern state of Israel. This version of the Menorah is not to be used outside the holy tabernacle, unlike the nine-branched Menorah of Hanukkah. Here is the prayer<sup>3</sup> and the translation:<sup>4</sup>

1. Unconditional love with connection to a flawless universe free from chaos.
2. Restrict reactive behavior and close the gates to negativity and limitation.
3. Open the channel to spiritual and physical sustenance, removing death from all aspects of life.
4. Gain the endurance necessary to persevere in all endeavors.
5. Provide deep insight and divine inspiration.
6. Desire to enlighten others with spiritual knowledge.
7. Grant the power of renewal, restoration and the manifestation of desires.

The prayer is related to have been spoken in a dream by David, the biblical slayer of Goliath and King of Israel.

*"In the dream, I was in a very dark place. I was tied up and could not move anything. I tried to scream but my voice was gone. It was very frightening. Then the Ana BeKoach prayer rose up in my mind. I started saying it in my thoughts. When I reached the third line everything disappeared and I woke up."*

Taking the first letter of every word in the *Ana BeKoach* may be taken to create a 42-letter name, known as the 42 Letter Name of God. The Kabbalists reveal that this sequence of Hebrew letters taps into the primordial force of creation.

Mr. Taylor reported that the *Ana BeKoach* can be very useful as a radionic reagent in those situations where the energetic problem being addressed has a strong emotional or spiritual component. He printed out the original Hebrew text (as shown above) and placed the strip of paper in the sample well of the radionic instrument.

As with any radionic reagent, test for appropriateness and effectiveness by adding the reagent to the well with the witness or sample, then check intensity of either General Vitality or the condition at hand – whatever is set on the rate banks. Addition of an appropriate reagent should lead to an increase in intensity of the organism or reduction in intensity of a negative pattern of energy.

# Nobel Winner Says DNA Molecules Can 'Teleport'

John Dunn of Techworld.com has reported that a Nobel Prize winning biologist has created a controversy by publishing the details of an experiment in which a fragment of DNA appeared to 'teleport' or imprint itself between test tubes.

According to a team headed by Luc Montagnier, previously known for his work on HIV and AIDS, two test tubes, one of which contained a tiny piece of bacterial DNA, the other pure water, were surrounded by a weak electromagnetic field of 7Hz. After 18 hours, as if by magic the same sequence of DNA was detectable in the test tube containing pure water when the standard polymerase chain reaction technique for DNA amplification was applied. Mr. Dunn noted that the original DNA sample had to be diluted many times over for the experiment to work, which might have explained why the phenomenon has not been detected in previous experiments.

The phenomenon might be very loosely described as 'teleportation' except that the bases project or imprint themselves across space rather than moving from one place to another. In other words, after imprinting the DNA information existed in *both* tubes.

Montagnier then compared the results with control experiments in which:

- The time limit was lowered
- No electromagnetic field was present or was present but at lower frequencies
- Both tubes contained pure water.

On every one of these, no imprint or "teleportation" took place.

The quantum effect - the imprinting of the DNA on the water - is not in itself the most contentious element of the experiment, so much as the relatively long timescales over which it appears to manifest itself. Quantum phenomena are assumed to show their faces in imperceptible fractions of a second and not seconds minutes and hours, and usually at very low temperatures approaching absolute zero. Revealing a process through which biology might display the underlying 'quantumness' of nature at room temperature would be startling.

Montagnier's experiment will have to be repeated by others to have any hope of being taken seriously. So far, some scientists have been publically incredulous.

*"It is hard to understand how the information can be stored within water over a timescale longer than picoseconds," said the Ruhr University in Bochum's Klaus Gerwert, quoted by New Scientist magazine, which broke the story.*

Dunn speculated: *"What does all of this mean? It could be that the propagation of life is able to make use of the quantum nature of reality to project itself in subtle ways, as has been hinted at in previous experiments. Alternatively, it could be that life itself is a complex projection of these quantum phenomena and utterly depends on them in ways not yet understood because they are incredibly hard to detect. Speculatively, (and Montagnier doesn't directly suggest anything so unsubstantiated), it could also be the little-understood quantum properties of the water molecule and not just its more obvious chemical bonding properties that gives it such a central role in the bio-engineering of life-forms. Water might be a good medium in which DNA can copy itself using processes that hint at quantum entanglement and 'teleportation' (our term)."*

Montagnier's paper goes on to discuss the phenomenon he claims to have uncovered using 'quantum field theory' within the context of his personal interest, disease propagation.

**This is another example in which mainstream science is converging on one of the central principles of radionics – that patterns of information can be copied, transmitted and imprinted into a new location.**

---

## **Working with Entropy** by Marty Lucas

Entropy is the idea that everything moves from being more organized to less organized. We were taught in physics that our entire universe is slowly becoming less and less organized due to entropy. However, new studies show that entropy is always constant, and that for everything in the universe that becomes less organized, something else becomes *more* organized. This research suggests that it may be possible to focus energy into reorganization of information that has become less organized over time.

From memories to DNA, organisms are storehouses of lots and lots of organized information. For instance, the basic DNA strands in the cells of an organism are nearly identical from the date of birth until the date of death. So if the DNA doesn't change then why does the organism change? If we apply the concept of entropy, what we see as aging is actually just an accumulation of disorganized and degraded information that takes place over the years. Logically, older and sicker organisms exhibit more entropy than younger, healthier ones.

I have been investigating entropy for some time now and have a number of radionic rates that I use. Some are much more complex than others, but in this article I wanted go over how I use one of the more simple rates:

### **Stored Entropy [63.90-32.00] – a measure of the amount of accumulated entropy in the organism.**

As an experiment, measure your own Stored Entropy first thing in the morning *before* your morning ablutions. After you have shaved, showered etc., measure it again. Then eat a healthy breakfast and measure it. Later in the day, eat something that you know is not so healthy and measure it once more.

Here is what you will see: After you eliminate wastes from your body the level of Stored Entropy will go down. After you eat a healthy, life-giving breakfast your Stored Entropy will also go down. After you eat something that is *not* life enhancing your level of Stored Entropy will go up.

I have done some experiments with balancing using this rate, but my results have been inconclusive. For this reason, the Stored Entropy rate should only be used for analysis at this time. I am working on development of more complex rates to use for balancing. Once I have proven them I will share that information.

Now here is where entropy becomes important to each of us as Operators. When you are working on a large project, check Stored Entropy in the organism before and after. If the entropy level goes up, then you must take corrective action immediately. Remember, accumulated entropy equals aging and illness! But because the Stored Entropy rate is only useful for analysis, the corrective balancing must be done in other areas, starting with biophotons, somatids and Chakras. As always, for maximum impact always ground your instrument.

And don't forget to take the time to energetically balance yourself! You can only help other organisms as long as you can help yourself.

Have fun and keep 'smiling and dialing'!

Marty

## Klebsiella Pasteurella

Longtime radionic researcher Mr. G.B. recently called to share his success using two of the radionic rates listed for *Klebsiella Pasteurella* in the KRT Electronic Rate Book, which he had observed to have high intensity readings as compared with General Vitality in his calves. He noted:

*The body temperature of the calves would begin to drop from the usual temperature of 100.1 or 100.2 degrees Fahrenheit. If body temperature got below 97.5 degrees they would die! If I could catch them by 98.5 degrees the immune system would respond and they would improve and survive."*

The rates he used for both analysis and balancing were: **4.00-100.00** and **93.00-72.00**. Other rates for *Klebsiella Pasteurella* listed in the E-Rate Book are: **15.50-27.00**, **49.60-41.40**, and **66.00-72.00**. As with any radionic operation, these rates are only useful for analyzing and balancing the energetic properties of an organism and are no replacement for the proper care that can be delivered by a licensed professional!

# 2012 Planting Calendar

In the countless centuries before mankind had scalar and mainstream technology to use on their farms and gardens, people relied on a greater knowledge and sensitivity to the planet's natural cycles. Planting by the "signs" helped deliver the extra farm and garden yields that might make the difference between survival and succumbing during the year ahead.

**Above-Ground:** Cited are the best and next best dates for sowing, planting and transplanting all crops that produce their fruits **above the ground**, including seed beds, flowers, herbs, pasture and lawn grass, as well as all cover crops. These dates also indicate the best dates to transplant **vines and fruit trees**. These are excellent dates for **setting eggs and fishing, as well as breeding** of cows, hogs and other livestock.

**Root Crops:** Indicates the best dates for planting all crops that bear fruit **in the ground**, including beets, peanuts, radishes, artichokes, carrots, rutabagas and turnips. Also ideal for bedding, planting, and transplanting potatoes.

**Cut & Harvest:** Indicates the best dates for **cutting hay and gathering all grain crops** to achieve quick curing and good keeping. Also good for planting and transplanting of all non-fruit bearing leaf and vine plants.
