

## The KRT Silver Sephorah Geomantic Signal Multiplier

### The Sephorah

This mystical symbol (also spelled *Sefirot*) is known as *The Tree of Life* within the esoteric Judaic Kabbalah. The symbol is used to describe the path to God and the manner in which He created the world *ex nihilo* (out of nothing). In many religions the story of creation is filled with metaphor, however the Sephorah is consistently described not as a story but as a *diagram* - a map of 22 pathways connecting 10 points, each of which explains one of the specific stages by which "divine energy" is transformed into the physical matter of the universe in which we live. Of particular interest is the fact that Kabbalists do not envision time and space as pre-existing - instead these are phases of existence that come into being as specific post-kindling stages on the Tree of Life. Later stages depict the binding and recombination of energetic materials until they are so dense that "pure, limitless energy is 'solidified' into the physical universe".

All of this should sound extremely familiar to the radionics researcher, who understands the process by which the focused intent of the trained operator is used to drive detection, assessment and transmission of scalar energy waveforms between specimen and source using the radionic instrument as the mind-matter interface. Just as the Kabbalah describes the birth of physical reality from "limitless divine energy", the trained operator uses the radionic instrument to pre-engineer physical reality by tapping into the boundless gulf of universal energy at the null point before linear time and physical space exist.

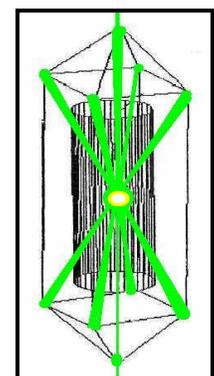

### Geomantic Signal Multiplication

When a couple of electronic design specialists like Mr. Beutlich and my father turned their attention to the study of the Kabbalah, it was immediately obvious to them that the diagram was not merely a symbolic representation of a mystical process, but that it was an actual blueprint for construction of a physical object - a rectangular box with pyramidal ends that has 10 corners that act as signal reflectors. This shape is geomantic in nature, meaning simply that the specific properties of this box (such as the lengths of the sides and the angles at which they connect) dictate the focal and intersection points of the energy being reflected from corner to corner and along both the inner edges and planar surfaces of the Sephorah.

In the same way that the geomantic properties of the optical lenses in a telescope determine that telescope's focal point and magnification strength, the shape and size of the silver Sephorah dictates the degree of signal focus and information density as the scalar energy is reflected from point to point along the 22 pathways described by the Kabbalah. Placing the Kelly radionic instrument's radio core coil at the center of this ancient signal multiplying and focusing device delivers the researcher's radionic information directly to the pre-physical place of kindling, the null point found at the first stage of the Sephorah.

### The Silver

Constructing the Sephorah out of 99.9% pure silver guaranteed maximum electrical conductivity while also tapping into silver's properties regarding energy transformation. It is no coincidence that silver has been revered historically not only for its monetary value, but also for its associations with creation *and* self-awareness. The Egyptians linked this metal with Isis, goddess of fertility and creation. In the Far East, silver is associated with the 6<sup>th</sup> chakra - the brow - from which springs activation of the lower brain/central nervous system and the birth of wisdom, insight and even clairvoyance.

Energy pathways intersect at a focal point in the center of the core coil.

## The Results

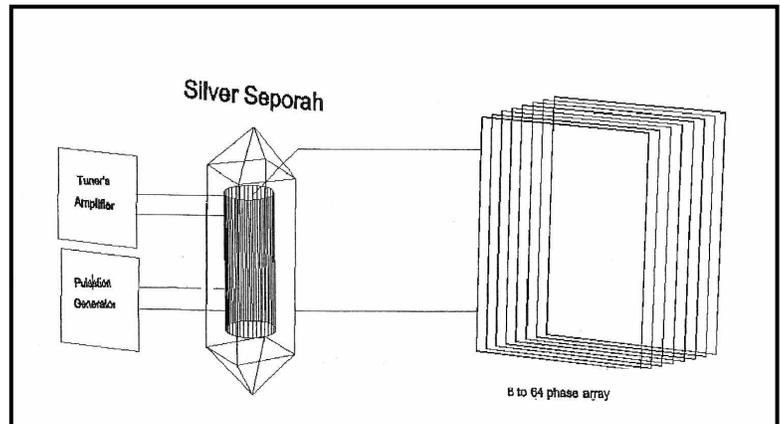

The signal focusing and intensifying properties of the silver Sephorah deliver improved accuracy and increased information density. Specific benefits to the researcher included a consistent reduction in dowsed broadcast times, as well as a decrease in the rate of repetition required to address recurring issues such as water contamination, efforts to modify soil composition and virtually any effort to cultivate life in a world permeated by chemical products, chemical poisons and chemical pollution. An overall increase in instrument effectiveness has also been observed by those researchers working in areas of excessive or fluctuating magnetic fields, both natural and artificially generated.

### The BNC Electronic Frequency Input:

The other fundamental change that marked the 3<sup>rd</sup> generation of Kelly Analyzers was the introduction of an electronic frequency input circuit through a "BNC"-type external connector - an industry-standard locking connector found on electronic test equipment.

The signals introduced through this circuit are delivered directly to the radio core coil at the heart of the silver Sephorah, where they are fused and focused with the amplified scalar energy patterns being delivered from the instrument's tuning capacitors. The new composite scalar-electromagnetic signal is then delivered to the antenna or antenna array for final transmission.

Scalar signals from the radionics instrument are fused and focused with electronic frequencies in the radio core coil at the center of the silver Sephorah before moving to a phase array antenna for data layering and transmission.

While the addition of this simple circuit may seem like a minor modification when compared with the esoteric and ancient technology of the Sephorah, in fact this was a change with profound implications - the Kelly instrument could finally stand as a universal radionics testing device with the power to assess the energetic state of *anything* that can be photographed, placed in a test tube, or sent through a wire. We've all heard that some dairy men play classical music in their milking parlors to sooth the cows. With the electronic frequency input, that dairy man could directly measure the impact of Brahms versus Beethoven on the General Vitality (9-49) of the herd.

Likewise, any electronic frequency can be transmitted in support of a scalar energy program. For example, the 7.83 Hz "ELF" Schumann Earth resonance frequency can be of assistance in dampening the effect of high tension power lines that pass through or near a field while also assisting as a carrier wave; this waveform can be directly introduced to any scalar transmission. Similarly, any frequency or frequency program from the work of Royal Rife may be introduced radionically to either the whole of an organism (0-100) or to targeted areas if used in conjunction with strategically chosen radionic rates.
