## View from the Dome

### Happy holidays everyone!

Are you still searching for the perfect holiday gifts for friends or loved ones? What if I told you that you can **give the gift of peace of mind** for the year to come and beyond? Or **give the gift of deep, restful sleep** to someone who currently tosses and turns the nights away? Now its possible with KRT's BETAR Mood Tone emitters!

Designed by KRT founder Peter J. Kelly in 1983, the first pocket-sized RELAX Mood Tone emitter – the “ELF I” was the output of his collaboration with Extreme Low Frequency (ELF) pioneer Dr. Andrija Puharich. The emitter was groundbreaking for its use of a dual-spin coil antenna to create the low frequency sound and scalar waves that resonate the user's physical and energetic bodies – the same coil antenna design found in all KRT radionic instruments. Since then KRT has been delivering BETAR Mood Tone Emitters - **wakeful relaxation with the flip of a switch**. The Earth Tone waveform produced by these units provides a soothing background hum that encourages the brain to settle into a serene low alpha brainwave state, hushing the kind of agitated thinking that can keep us irritated and unfocused.

You'll want a BETAR RELAX Mood Tone emitter if you **spend a lot of time behind the wheel** of a vehicle or tractor, so you can let the hours slip away in a state of wakeful relaxation. This feature is so popular that “Home & Roam” Edition emitters come equipped with power adapters for both the house/office and the car. For example, this summer we had a family visit our open house event, driving all the way from Iowa to participate. Afterwards they were planning to drive to the coast to see the Atlantic Ocean, then turn around and drive all the way back to Iowa. They were a little skeptical when I urged them to take a Mood Tone emitter with them, finally giving in when I refused to accept any payment. I told them, “You've already driven hundreds of miles to get here. Now finish the trip with the emitter in the car. When you get back home if you don't want to keep it just mail it back. If you like it, send us a check.” Within the week a check arrived!

Brand new at KRT, a Mood Tone emitter configured to deliver the **BETAR SLEEP Tone** – a sound wave that is even lower and slower than the RELAX Tone. The SLEEP Tone emitter is calibrated to 4 cycles per second, in the zone between the dream world of the theta state and the **deep sleep where real rest and healing take place** – the delta state. It can also help reduce the number of times you wake in the night by helping the brain to remain in a steady state of equilibrium.

**Invest in contentment with a BETAR Mood Tone Emitter!** You and your loved ones deserve the ability to RELAX and SLEEP. Even at full price these emitters are a tremendous value when compared with the money spent combating the effects of stress, tension and sleep deficiency, but right now we're offering **deep holiday discounts** to encourage everyone to give them a try. And just like our friends from Iowa, **you have nothing to risk** but the price of return postage when you order a BETAR Mood Tone emitter. If you are not 100% satisfied simply send it back undamaged within 30 days for a prompt, no-hassle refund.

**From all of us at KRT, please accept our most sincere wishes for happy holidays and a healthy, prosperous 2011!**

PS: **Do you currently own a BETAR sound therapy system?** Please drop us a note if you would like to be included in our online directory of BETAR systems and services at the all new BETAR website at: **www.betar.com!**
